## ABBREVIATIONS AND ACRONYMS

AF	Africa Region
AVS	Annual Volunteer Survey
BHO	behavioral health and outreach unit
CDC	Centers for Disease Control and Prevention
CD	country director
CHDCAT	Country Healthcare Delivery Capacity Assessment Tool
COVID-19	Coronavirus Disease-19
CREG	Country Re-entry Guide
DSM-5	Diagnostic and Statistical Manual of Mental Disorders
DOL	U.S. Department of Labor
EAT	Epidemiological Assessment Tool
ENT	ear, nose, and throat
ESS	Epidemiologic Surveillance System
EMA	Europe, Mediterranean, and Asia Region
FARM	Finance and Resource Management Unit
FECA	Federal Employees' Compensation Act
HIV	Human Immunodeficiency Virus
HOR	home of record
HOV	Health of the Volunteer Report
IAP	Inter-America and the Pacific Region
ICU	Intensive Care Unit
medevac	medical evacuation
OHS	Office of Health Services
OWCP	Office of Workers' Compensation Programs
OWID	Our World in Data
PCMO	Peace Corps Medical Officer
PCMEDICS	Peace Corps Medical Electronic Documentation and Inventory Control System
PEF	Patient Encounter Form
PrEP	pre-exposure prophylaxis
PEP	post-exposure prophylaxis
PTSD	post-traumatic stress disorder
RPCV	Returned Peace Corps Volunteer
SNOMED CT	Systematized Nomenclature of Medicine—Clinical Terms
TG	Technical Guidelines
VT	Volunteer-Trainee years
WHO	World Health Organization

## EXECUTIVE SUMMARY

The *2022 Health of the Volunteer (HOV) Report* provides a summary of the key health conditions of the 950 Peace Corps Volunteers, Trainees, and Peace Corps Response Volunteers (collectively referred to as Volunteers), who served in 45 countries in 2022. The findings reflect the unique challenges of 2022, as posts met the conditions that allowed Volunteers to return to service following the COVID-19-related evacuation of March 2020. Volunteers first started returning to service in March 2022.

The Peace Corps acknowledges the delay in publishing this report, which was due to disruptions in data collection and analysis following the global evacuation and phased return to service. The agency anticipates releasing the 2023 and 2024 HOV reports in the upcoming months. Additionally, this report includes less comparative analysis than previous years because it covers fewer than ten months of data, during which countries re-entered service at different times. This resulted in a smaller number of Volunteers serving, affecting length of service and causing some disease rates to vary significantly from prior years.

Gastrointestinal conditions; infectious diseases; and conditions affecting the ears, nose, and throat (ENT) were the most reported conditions in 2022. COVID-19 remained prevalent worldwide when Volunteers returned to service in 2022 and it was an important threat to Volunteer health. Despite the concerns, there were no severe cases of COVID-19 and no deaths. The percentage of Volunteers aged 50 years or older was 9.5 percent, which was higher than in previous years. There were no severe cases of malaria in 2022. The 10 most frequently reported health categories are highlighted in this report, along with in-country hospitalization and medical evacuation (medevac) data.

## RETURN TO SERVICE

The Peace Corps began the process of returning Volunteers to host countries in 2022. The Peace Corps developed a Country Re-entry Guide (CREG) and a series of indicators to help determine when and where it was safe and appropriate for Volunteers to re-establish service following the COVID-19 pandemic. In 2021 and 2022, after effective vaccines and treatment were developed, the Peace Corps began assessing each host country's ability to accept Volunteers for service. The epidemiology unit, Office of Health Services (OHS) clinical staff, Office of Global Operations, senior leadership, and other stakeholders within the agency developed indicators known as the External Review Criteria for Re-entry of Volunteers, which rated each country's ability to provide health care, mental health support, safety and security, transportation, housing, and training.

An internal OHS data-gathering tool known as the Country Healthcare Delivery Capacity Assessment Tool (CHDCAT) was also created. This tool was also used as a criterion for Volunteer re-entry. The CHDCAT included the following parameters: Our World in Data (OWID) case and mortality statistics<sup>1</sup>, COVID-19 transmission trends, the availability of air ambulances, intensive care unit (ICU) and hospital bed capacity in each country, emergency medical care, and the capabilities at the regional medical hubs in Morocco, South Africa, and Thailand. This tool was used by Peace Corps medical officers (PCMOs) along with other post staff who assigned scores for each indicator.

Additionally, the epidemiology unit completed the Epidemiological Assessment Tool (EAT), monitored COVID-19 trends produced by OWID, including positivity rates, death rates, testing rates per 1,000 people, public health capacity, and country-specific Ministry of Health data. The information extracted from these tools was used to determine the Peace Corps' ability to accommodate and support Volunteer health at each post.

The Peace Corps decided to recruit Volunteers only for posts that could adequately support Volunteers medically, had ICU facilities, and had the highest resources for Volunteer care. Initially, only a small number of Volunteers were sent to the posts that met the re-entry requirements. Re-entry in some countries faced challenges due to issues with regional medevac hubs, restrictions on air ambulance medevacs, country lockdowns, mandatory quarantines, and other logistical barriers. This led to extensive correspondence with U.S. Embassies, Ministries of Health, the Centers for Disease Control and Prevention (CDC), and Peace Corps country directors (CDs) throughout the re-entry process.

Additional measures to reduce COVID-19 risk included requiring all Volunteers to test negative and to be fully vaccinated prior to departure to their country of service. Upon arrival, all Volunteers underwent a mandatory seven-day isolation period and were provided with hand sanitizers, masks, gloves, and COVID-19 Rapid Antigen Tests to support ongoing prevention and early detection throughout their service.

Furthermore, the Peace Corps secured supplies of Paxlovid and Molnupiravir—anti-viral drugs used to treat COVID-19 from the U.S. Department of Health and Human Services—ensuring access to treatment for Volunteers, if needed.

Psychological stress was recognized as a significant factor in Volunteer health during the pandemic. To address this, the behavioral health and outreach unit developed tools to assess incoming Volunteers and train staff accordingly.

As COVID-19 restrictions eased and more vaccines with booster doses became available, an increasing number of posts reopened. By the end of 2022, Volunteers were serving in a total of 45 countries throughout the world. See Appendix A for the re-entry timing of each post.

## INTRODUCTION

The 2022 *Health of the Volunteer Report* reflects the OHS mission to monitor and evaluate trends in global and regional health conditions among Volunteers. This report provides information on health conditions reported among 950 Volunteers serving in 45 countries across three regions: Africa (AF); Europe, Mediterranean, and Asia (EMA); and Inter-America and the Pacific (IAP). Volunteer-Trainee years were used to measure time at risk, combining number of Volunteers and length of service. This accounts for partial and full-year service and allows fair comparisons across posts. By region, the contribution of volunteer-trainee years was 164.4 for the Africa region, 51.5 for the EMA region and 136.2 for the IAP region.

Table 1 lists all the posts included in the three different regions. Note that some posts cover multiple countries.

*Table 1. Posts Years and Volunteer-Trainee Years by Region*

Africa Region		Europe, Mediterranean, and Asia Region		Inter-America & the Pacific Region	
18 posts with 18 countries	Vt-Years	9 posts with 10 countries	Vt-Years	14 posts with 17 countries	Vt-Years
Benin	11.2	Albania & Montenegro	5.2	Belize	8.4
Botswana	3.2	Cambodia	7.3	Colombia	23.1
Cameroon	1.9	Kosovo	5.9	Costa Rica	8.0
Eswatini	3.2	Kyrgyz Republic	6.3	Dominican Republic	19.2
Ghana	6.5	Mongolia	5.6	Eastern Caribbean (Saint Lucia, Grenada, Dominica, Saint Vincent and the Grenadines)	7.7
Guinea	4.5	Morocco	15.0	Ecuador	17.1
Kenya	6.0	North Macedonia	4.3	Fiji	0.3
Lesotho	3.9	Thailand	0.2	Guatemala	4.7
Madagascar	8.1	Viet Nam	1.8	Guyana	5.5
Namibia	7.2			Jamaica	1.6
Rwanda	9.8			Mexico	6.1
Senegal	7.8			Panama	7.3
Sierra Leone	8.6			Paraguay	12.5
South Africa	2.2			Peru	14.8
The Gambia	14.6				
Togo	9.9				
Uganda	15.7				
Zambia	40.2				
<b>Totals</b>	<b>164.4</b>	<b>Totals</b>	<b>51.5</b>	<b>Totals</b>	<b>136.2</b>

Surveillance data were collected between March 22, 2022 and December 31, 2022. The data in this report represents only a partial year and was not compared to previous years to identify any notable variations. The data are presented in the form of frequencies, percentages, mean  $\pm$  standard deviation, and incidence rates per 100 Volunteer-trainee years (Vt-years).

## METHODOLOGY

The Peace Corps provides necessary and appropriate medical care to all Volunteers during the entirety of their Peace Corps service. Each encounter with a Volunteer is recorded using a Patient Encounter Form (PEF) in the Peace Corps Medical Electronic Documentation and Inventory Control System (PCMEDICS)<sup>2</sup>.

Two different coding systems are utilized for an encounter, each having a different purpose:

- Systematized Nomenclature of Medicine—Clinical Terms (SNOMED CT) codes are used for clinical documentation.
- Epidemiology and Surveillance System<sup>3</sup> (ESS) codes (called “Epi Codes”) are used for surveillance purposes and to help categorize illnesses and injuries.

These data are extracted, reviewed for accuracy, and finalized for analysis. The surveillance system results are summarized in the *2022 Health of the Volunteer Report*.

The ESS data are divided into 22 major disease and injury categories, encompassing 175 specific Epi Codes that cover both infectious and non-infectious conditions of interest (Appendix B).

## DATA SOURCES AND EXTRACTION

The ESS uses PCMEDICS as its primary data source, as it contains all medical encounters for Volunteers during their Peace Corps service. The objectives of the ESS are to:

- Estimate and characterize the health burden among Volunteers in regions and countries around the world.
- Identify the distribution and spread of specific diseases, injuries, or health-related events among Volunteers in specific countries or regions.
- Provide a basis to implement and evaluate prevention and control strategies.
- Monitor changes in specific infectious and non-communicable diseases.
- Generate data that aids in the identification of conditions that require further investigation and prevention measures.

## SOURCES FOR REPORT

**PCMEDICS:** Three types of data were retrieved: disease/injury data, medical evacuation data (medevacs), and hospitalization data.

**Peace Corps Volunteer Database Management System:** The Peace Corps Volunteer Database Management System (PCVDBMS) provided demographic data of Volunteers, and VT years for all countries, regions, sex, and endemic diseases.

**Post-service claims:** Data were provided through the OHS post-service unit via the Department of Labor. Claims are filed, adjudicated, and paid to the claimant by the U.S. Department of Labor (DOL), Office of Workers’ Compensation Programs (OWCP). The Peace Corps assists Returned Peace Corps Volunteers with the claims process and ultimately pays the Department of Labor for the Federal Employees’ Compensation Act (FECA) claims related to service-connected illnesses or injuries through a subsequent charge-back.

**Annual Volunteer Survey<sup>4</sup>:** In normal years, prevalence estimates of binge drinking and smoking are derived from the All Volunteer Survey (AVS). Since the AVS was not fielded in 2022, these indicators are not reported.

**Medical evacuation data on air ambulances:** The finance and resource management unit (FARM) provided data that were used to track air ambulances usage.

## DATA ANALYSES AND CALCULATIONS

### DATA PRECISION AND ROUNDING

Raw data were cleaned, validated, and analyzed. Intermediate calculations used precision to the thousandth decimal place, with the results rounded to the nearest tenth. Small rounding errors may cause totals to not sum precisely to 100 percent.

### INCIDENCE RATE CALCULATIONS

Incidence rates, which measure the frequency of new disease or injury cases, were calculated as follows:

$$\text{Incidence Rate in VT years} = \frac{\text{Number of new cases of disease or injury}}{\text{Person time the population was at risk in VT years}} \times 100$$

### PERSON-TIME

Represents the actual time at risk during the surveillance period. It is used to standardize incidence rate calculations. Sex-specific, disease-specific, and region-specific VT years were calculated for conditions and populations.

### VOLUNTEER-TRAINEE YEARS

A person-time estimate was calculated to represent the actual time at risk per 100 Volunteer-years for all Volunteers who participated in the surveillance period from March 22, 2022 to December 31, 2022. VT years account for both the number of Volunteers and the length of time each served. This measure provides a more accurate estimate of time at risk because it includes the total time contributed by each Volunteer, whether they served a partial or full calendar year. Using VT years also standardizes comparisons between different posts and different post sizes.

### REGION VOLUNTEER-TRAINEE YEARS

Region VT years is a person-time estimate of the actual time at risk in years that all individuals contributed to the surveillance period within the AF, EMA, or IAP regions. It is expressed as rate per 100 years and represents the value for all Volunteers who contributed to the surveillance period in a specific region.

## FEMALE AND MALE VOLUNTEER-TRAINEE YEARS

Female and Male VT years were used to calculate incidence rates for conditions specific to females (e.g., gynecological conditions) or males (e.g., prostatitis, testicular mass) with the numerator as the number of cases and the denominator as the total female or male population at risk with the incidence rate expressed as number of cases per 100 female (or male) VT years.

## DISEASE-SPECIFIC INCIDENCE RATES

For endemic diseases (e.g., arboviral infections, dengue, malaria, schistosomiasis), incidence rates were calculated using the at-risk Volunteer population in affected countries. Countries classified as malaria endemic are those countries in which at least some Volunteers were required to take malaria prophylaxis medication on an ongoing basis throughout service due to the risk of malaria. Where malaria was endemic in only certain countries, the total number of Volunteers serving in countries at risk were included in the denominator as the population at risk.

Appendices include counts and rates of country-specific diseases, medevac, and hospitalizations.

## BEHAVIORAL HEALTH CONCERNS AND BEHAVIORAL HEALTH DIAGNOSES

To classify mental health conditions among Volunteers, the Peace Corps makes a distinction between behavioral health concerns and behavioral health diagnoses.

A behavioral or mental health diagnosis, as defined by *Diagnostic and Statistical Manual of Mental Disorders (DSM-5)*<sup>5</sup>, is made by a licensed mental health professional.

A behavioral health concern, reported through the ESS, is a one-on-one discussion (in person or by telephone) with a PCMO to receive support in the form of empathetic interactions and minor skill building to address factors such as adjustment issues, interpersonal problems, reactions to stress, and loneliness.

Behavioral health concerns usually relate to stress or adjustment and do not necessarily lead to psychological consultation. For the purposes of this report, the distinction is that a behavioral health diagnosis is a confirmed mental health condition as defined by a licensed mental health professional.

## TREND ANALYSIS

Trend lines were used to assess changes in incidence rates over time, with the best-fit model determined by the  $R^2$  value.

## SOFTWARE TOOLS

**IBM SPSS Statistics (version: 28.0.1.1):** Used for disease and injury frequency analysis and incidence rate calculations.

**Microsoft Excel:** Used for data analysis, trend analysis, and visualization.

## DATA STRENGTHS AND LIMITATIONS

### STRENGTHS

Compared to the previous paper-based surveillance system, the implementation of PCMEDICS in 2016 significantly improved case detection accuracy and timeliness of reporting.

Using an electronic medical record-based surveillance system like PCMEDICS has made it much easier to identify disease trends and craft preventive actions for Volunteers in countries with inconsistent healthcare quality.

The ESS data can be validated using clinical data contained in PCMEDICS.

### LIMITATIONS

Underreporting may occur due to miscoding, omitted coding, or diagnostic uncertainties. If Volunteers do not seek health care, reported cases may not reflect the actual disease burden.

Small sample sizes (e.g., fewer than 20 cases) can lead to rate fluctuations.

Conditions diagnosed on medevacs that lead to medical separation<sup>6</sup> may not be completely captured in the ESS, as care transitions to providers outside of the Peace Corps health care system.

The analysis covers less than ten months of data, during which countries re-entered service at different times. This resulted in a small number of Volunteers serving in 2022, affecting the length of service and causing some disease rates to be higher or lower than previous years.

## RESULTS

### DEMOGRAPHIC DATA

The demographic results of 950 Volunteers, retrieved from the PCVDBMS database, were calculated from March to December 2022 and included any Volunteer who served at least one day in this timeframe.

The mean age of Volunteers was  $29 \pm 11.4$  years, with a minimum age of 20 years and a maximum age of 82 years. The range was 62 years. The median was 25 years. Approximately 5.9 percent ( $n=56$ ) of the total Volunteer population were Peace Corps Response Volunteers.

The distribution of Volunteers across different age groups can be seen in Table 2, which shows the frequencies, and VT years of these age groups. The majority (76.7 percent) of Volunteers were between 20-29 years.

Table 2. Volunteer Age Groups

Age Groups (years)	Number of Volunteers	Sum of VT years
20-29	729	269.0
30-39	97	36.5
40-49	33	13.2
$\geq 50$	91	33.4
<b>Total</b>	<b>950</b>	<b>352.1</b>

In 2022, Volunteers 50 years of age and older served a total of 33.4 VT years, which accounted for 9.5 percent of the total VT years served.

Figure 1. Percent Volunteer-Trainee Years in Volunteers 50 Years and Above by Year

Figure 2. Total Volunteer-Trainee Years from 2008-2022

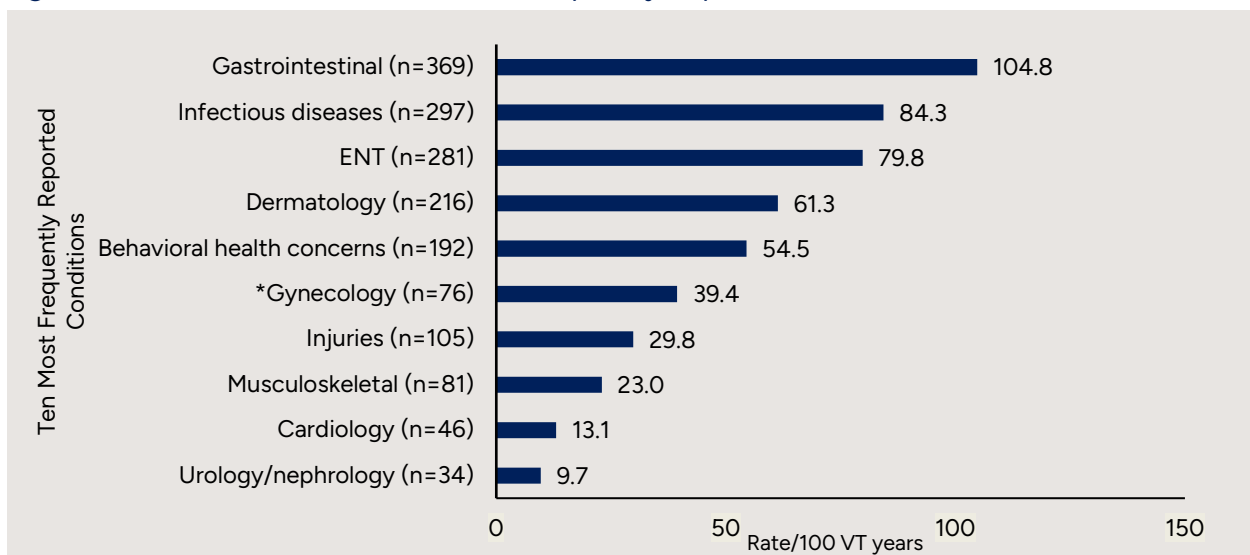

The trend in total VT years served, shown in Figure 2, illustrates the dramatic drop in 2020 due to the COVID-19 evacuation and the slow buildup in 2022 as Volunteers began to re-enter service. The truncated time served in 2020 led to a 79.3 percent decrease in total VT years from 2019 to 2020. In 2021 there were no Volunteers overseas. In 2022, the total VT years was 352.1, as Volunteers returned to service.

### MOST FREQUENTLY REPORTED CONDITIONS

In decreasing frequency, the ten most reported categories of diseases or injuries were: gastrointestinal, infectious diseases, ENT conditions, dermatology, behavioral health concerns, gynecology, injuries, musculoskeletal, cardiology, and urology/nephrology conditions (Figure 3). These 10 categories accounted for 91 percent (n=1,697) of all reported cases (n=1,868).

Figure 3. Incidence Rates for Ten Most Frequently Reported Conditions

\*Gynecological conditions were calculated per 100 female VT years

In the next section, the ten most common categories of illness and injury as designated by the ESS data are presented, along with the top three specific illnesses within each category.

## GASTROINTESTINAL

As shown in Figure 3, gastrointestinal ranked first among the ten most common categories of illness and injury among Volunteers. There were 369 cases with an overall incidence rate of 104.8 per 100 VT years.

The top three diagnoses were:

- Diarrhea, etiology undetermined: n=216 (61.3 rate/100 VT years)
- Gastroenteritis, presumed: n=125 (35.5 rate/100 VT years)
- Gastroesophageal reflux disease (GERD): n=9 (2.6 rate/100 VT years)

See Appendix C: 2022 Country-Specific Gastrointestinal Conditions Data Tables.

## INFECTIOUS DISEASES

Infectious diseases ranked second among the top ten categories. There were 297 total cases, with an overall incidence rate of 84.3 per 100 VT years.

The top three diagnoses were:

- COVID-19 (SARS Coronavirus 2): n=198 (56.2 rate/100 VT years)
- Other febrile illness: n=33 (9.4 rate/100 VT years)
- Influenza-like illness: n=30 (8.5 rate/100 VT years)

Despite the comprehensive preventative measures implemented, there were still a high number of COVID-19 infections among Volunteers. This trend is not unexpected given the highly contagious nature of the virus. Volunteers were fully vaccinated and tested negative for COVID-19 before entering their country of service. Upon arrival, they completed a mandatory seven-day isolation period and were equipped with masks, hand sanitizers, gloves, and COVID-19 rapid test kits to minimize the risk of infection and transmission.

Most of the countries where Volunteers serve are in tropical regions, which increases the likelihood of exposure to mosquito-borne illness. However, the limited availability of specialized laboratory facilities in these regions often makes it challenging to confirm the specific cause of febrile illnesses. Additionally, the risk of exposure to rabid animals through bites and scratches is elevated in many of these countries, necessitating the administration of rabies post-exposure prophylaxis when such incidents occur.

See Appendix C: 2022 Country-Specific Infectious Diseases Conditions Data Tables.

## EAR, NOSE, AND THROAT

Ear, nose, and throat (ENT) conditions ranked third among the top ten categories. There were 281 total cases, with an overall incidence rate of 79.8 per 100 VT years.

The top three diagnosis were:

- Upper respiratory tract infection: n=209 (59.4 rate/100 VT years)
- Viral pharyngitis: n=32 (9.1 rate/100 years)

- Bacterial pharyngitis: n=18 (5.1 rate/100 VT years)

See Appendix C: 2022 Country-Specific ENT Condition Data Tables.

## DERMATOLOGY

Dermatology ranked fourth among the ten most common categories. There were 216 cases, with an overall incidence rate of 61.3 per 100 VT years.

The top three diagnoses were:

- Infected/inflamed insect bite or sting: n=80 (22.7 rate per 100 VT years)
- Contact dermatitis: n=37 (10.5 rate per 100 VT years)
- Laceration of skin: n=25 (7.1 rate per 100 VT years)

See Appendix C: 2022 Country-Specific Dermatology Conditions Data Tables.

## BEHAVIORAL HEALTH CONCERNS

Behavioral health concerns ranked fifth among the top ten most common categories. There were 192 cases with an overall incidence rate of 54.5 per 100 VT years.

The top three diagnoses were:

- Adjustment difficulty: n=33 (9.4 rate/100 VT years)
- Concerns related to anxiety: n=22 (6.2 rate/100 VT year)
- COVID psychosocial factors: n=21 (6.0 rate/100 VT years)

Due to the COVID-19 pandemic, the COVID psychosocial factors were introduced in the ESS in 2022. These factors included whether the Volunteer experienced any of the following:

- Personal fear of contracting COVID-19
- Uncertainty about government COVID-19 restrictions (e.g., travel restrictions, stay at home restrictions, border closings, etc.)
- Isolation due to COVID-19
- Personal infection of COVID-19 (i.e., Volunteer has been infected with the virus)
- Worry and concern about COVID-19 infection of others (e.g., host family, coworkers, host community, or Volunteer's friends and family back home)
- Grief related to COVID-19
- Stress related to vaccination status (i.e., vaccination privilege)

Criteria for inclusion required that the psychological factors were a precipitating issue or co-occurrence with other concerns or diagnosis and present for two weeks or longer.

See Appendix C: 2022 Country-Specific Behavioral Health Concerns Data Tables.

## GYNECOLOGY

Gynecology ranked sixth among the top ten most common categories. There were 76 cases, with an overall incidence rate of 39.4 per 100 female VT years.

The top three diagnoses were:

- Vaginal candidiasis: n=28 (14.5 rate/100 female VT years)
- Abnormal uterine bleeding: n=11 (5.7 rate/100 female VT years)
- Amenorrhea, primary or secondary: n=8 (4.1 VT years)

Gynecological conditions were calculated as a rate per 100 female VT years.

See Appendix C: 2022 Country-Specific Gynecological Conditions Data Tables.

## INJURIES

Injuries ranked seventh among the ten most common categories. There were 105 cases, with an overall incidence rate of 29.8 per 100 VT years.

The top three diagnosis were:

- Animal bite or scratch injury: n=36 (10.2 rate/100 VT years)
- Falling injury: n=20 (5.7 rate/100 VT years)
- Sports related injury: n= 15 (4.3 rate/100 VT years)

See Appendix C: 2022 Country-Specific Injuries Data Tables.

## MUSCULOSKELETAL

Musculoskeletal conditions ranked eighth among the ten most common categories. There were 81 cases, with an overall incidence rate of 23.0 per 100 VT years.

The top three diagnoses were:

- Sprain or strain: n = 34 (9.7 rate/100 VT years)
- Joint pain, new onset: n = 25 (7.1 rate/100 VT years)
- Back pain: n=13 (3.7 rate/100 VT years)

See Appendix C: 2022 Country-Specific Musculoskeletal Conditions Data Tables.

## CARDIOLOGY

Cardiology ranked ninth among the ten most common categories. There were 46 cases, with an overall incidence rate of 13.1 per 100 VT years.

The top three diagnoses were:

- Elevated blood pressure: n=37 (10.5 rate/100 VT years)
- Hypertension, new onset: n=8 (2.3 rate/100 VT years)
- Serious cardiac event: n=1 (0.3 rate/100 VT years)

See Appendix C: 2022 Country-Specific Cardiological Conditions Data Tables.

## UROLOGY/NEPHROLOGY

Urology/nephrology ranked tenth among the top ten most common categories. There were 34 cases, with an overall incidence rate of 9.7 per 100 VT years.

The top three diagnoses were:

- Lab-confirmed urinary tract infection (UTI): n=16 (4.5 rate/100VT years)
- Presumed UTI: n=13 (3.7 rate/100 VT years)
- Urolithiasis (urogenital stones), radiographically confirmed: n=2 (0.6 rate/100 VT years)

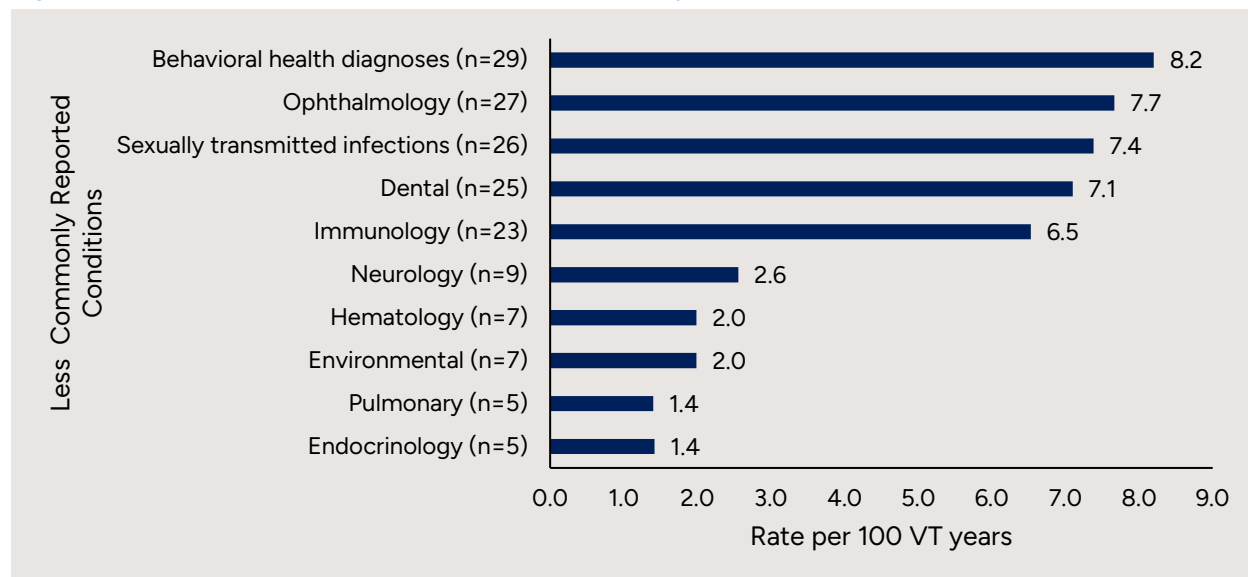

See Appendix C: 2022 Country-Specific Urology/Nephrology Conditions Data Tables.

## INCIDENCE RATE OF OTHER LESS COMMON CONDITIONS

The 10 least frequently reported disease or injury conditions comprised 8.8 percent (n=164) of all conditions (n=1,868). Figure 4 ranks these conditions by incidence rate/100 VT years. Behavioral health diagnoses were the most common, with an incidence rate of 8.2 rate per 100 VT years (n=29), while endocrinology had the lowest incidence rate with a rate of 1.4 per 100 VT years (n=5).

See Appendix C: 2022 Country-Specific Data Tables for Other Less Common Conditions.

Figure 4. Incidence Rates of Other, Less Commonly Reported Conditions

## OTHER DISEASES

### MALARIA

In 2022, there were four (4) cases of lab-confirmed falciparum malaria, one (1) case of lab-confirmed non-falciparum malaria, and four (4) cases of presumed malaria among Volunteers. The global incidence rate for all laboratory-confirmed malaria and presumed malaria was 3.0 per 100 malaria VT years (n=9). All malaria cases occurred in the Africa Region. There were no cases of severe malaria in 2022.

Lab-confirmed falciparum malaria: (one case each)

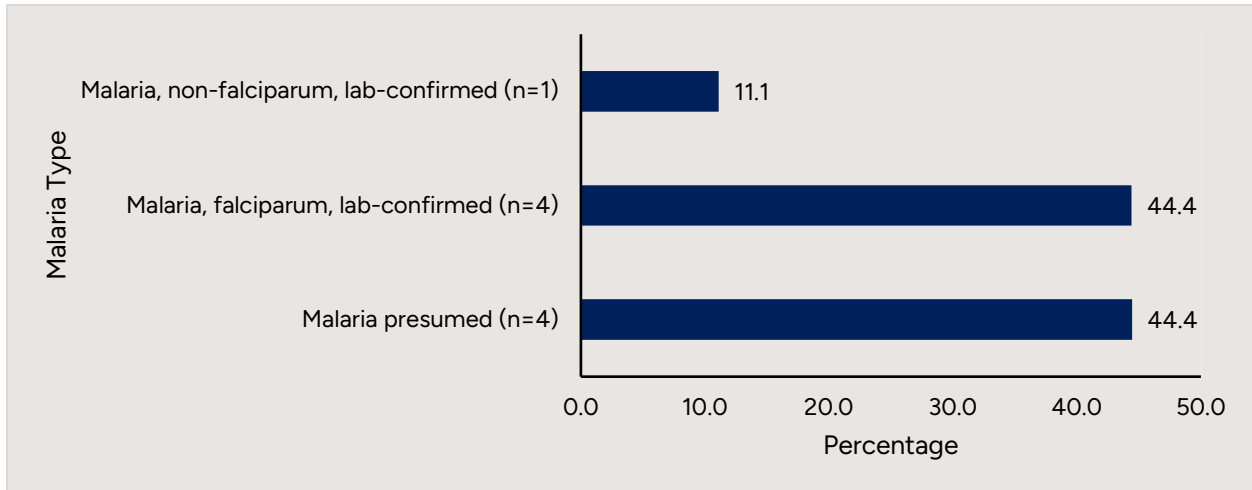

- The Gambia
- Uganda
- Togo

- Zambia

Presumed malaria: (one case each)

- Zambia
- Kenya
- Madagascar
- Guinea

Figure 5. Percent of Malaria by Type

## SCHISTOSOMIASIS

In 2022, the global incidence rate was 3.4 per 100 schistosomiasis VT years (n=6), with cases reported in Rwanda (AF) and Zambia (AF).

## CHIKUNGUNYA

There were no reported cases of Chikungunya infections in 2022.

## DENGUE

In 2022, the global incidence rate for dengue was 1.0 per 100 dengue VT years (n=3). There were three (3) laboratory-confirmed cases in the Dominican Republic (IAP), Colombia (IAP), and Togo (AF).

## HUMAN IMMUNODEFICIENCY VIRUS

There were no new cases of human immunodeficiency virus (HIV) infection in 2022.

## HIV PRE-EXPOSURE PROPHYLAXIS

HIV pre-exposure prophylaxis (PrEP) is a prevention intervention using anti-retroviral medications given to at-risk individuals. In 2022, the global incidence rate for HIV PrEP use was 3.1 per 100 VT years (n=11).

- AF: 3.6 (n=6)
- IAP: 3.7 (n=5)
- EMA: No reported HIV PrEP use

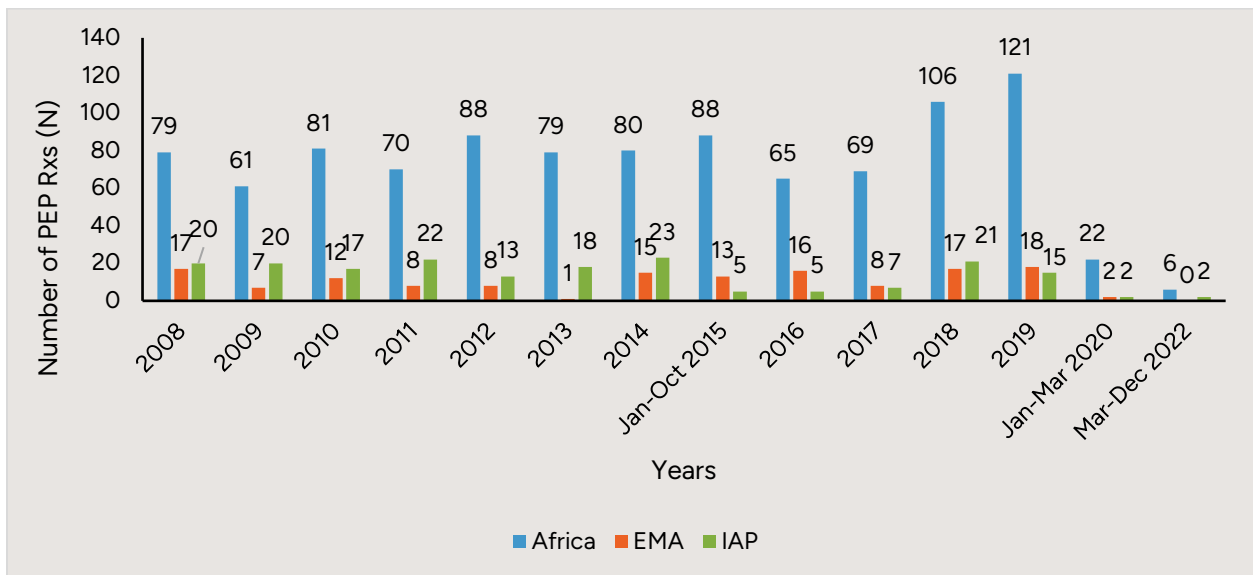

### HIV POST-EXPOSURE PROPHYLAXIS

HIV post-exposure prophylaxis (PEP) is a short course of anti-retroviral medications prescribed to prevent HIV after potential or high-risk exposure. In 2022, the global incidence rate for HIV PEP prophylaxis was 2.3 per 100 VT years (n=8).

By region:

- AF: 3.6 (n=6)
- IAP: 1.5 (n=2)
- EMA: No reported HIV PEP use

Figure 6. Number of HIV Post-Exposure Prophylaxis

## MEDICAL EVACUATIONS

A medical evacuation<sup>7</sup> (medevac) occurs when a Volunteer has a medical, dental, and/or a behavioral health condition that requires evaluation and/or treatment beyond the scope of care available in the host country where the Volunteer serves. The Volunteer is then evacuated to another country that can provide this treatment.

### RATES

From March through December of 2022, 20 medevacs took place. The global incidence rate for medevacs was 5.7 per 100 VT years (n=20).

Overall:

- Median age: 28 years
- Mean  $\pm$  SD: 33 $\pm$ 11

Age range: 24 to 60 years of age.

By region:

- AF: 7.9 (n=13); median age: 27 years (mean: 29  $\pm$  7.04; range 23 to 45 years)
- IAP: 4.4 (n=6); median was 42 years (mean: 42  $\pm$  16.23; range 25 to 60)
- EMA: 1.9 (n=1)

### DESTINATIONS

Places where Volunteers may be evacuated to:

- A Peace Corps regional medical hub (e.g., Morocco, South Africa, or Thailand)
- A Volunteer's home of record (HOR) in the United States
- Washington, D.C.
- Other countries closer to the host country that have the necessary medical facilities (e.g., New Zealand).

Destination incidence rates:

- United States: 5.1 (90%, n= 18)
- HOR: 3.4 (60%, n=12)
- Washington, D.C.: 1.7 (30%, n=6)
- South Africa: 1.2 (10%, n=2)

Figure 7. Medical Evacuations by Destination

## REASONS

As summarized in Table 3, in 2022:

- 65 percent (n=13) of medical evacuations were for medical conditions
- 30 percent(n=6) were for behavioral health conditions
- 5 percent (n=1) were for both medical and behavioral health conditions
- No medevacs due to dental conditions

The majority of Volunteers who were evacuated due to behavioral health conditions were evacuated to their HOR location, as behavioral health evaluation and treatment generally require longer periods of care.

*Table 3. Reasons for Medical Evacuation*

Destination	Behavioral Health	Medical	Medical & Behavioral Health	Dental	Total
DC	5% (n=1)	25% (n=5)	0% (n=0)	0% (n=0)	30% (n=6)
HOR	25% (n=5)	30% (n=6)	5 % (n=1)	0 % (n=0)	60% (n=12)
South Africa	0% (n=0)	10% (n=2)	0% (n=0)	0 % (n=0)	10% (n=2)
<b>Total</b>	<b>30%</b> <b>(n=6)</b>	<b>65%</b> <b>(n=13)</b>	<b>5%</b> <b>(n=1)</b>	<b>0%</b> <b>(n=0)</b>	<b>100%</b> <b>(n=20)</b>

## PER REGION

AF reported the highest number of medical evacuations:

- 9 medical (5.5 rate/100 VT years)
- 3 behavioral health (1.8 rate/100 VT years)
- 1 combined medical and behavioral health conditions (0.6 rate/100 VT years)

This was followed by IAP:

- 3 medical evacuations (2.2 rate/100 VT years)
- 3 behavioral health evacuations (2.2 rate/100 VT years)

The EMA region reported

- 1 medical evacuation (1.9 rate/100 VT years)

Table 4. Medical Evacuations by Type and Region

Region	Behavioral	Medical	Dental	Medical & Behavioral	Total
AF	1.8 rate/100 VT years 15% (n=3)	5.5 rate/100 VT years 45% (n=9)	0% (n=0)	0.6 rate/100 VT years 5% (n=1)	7.9 rate/100 VT years 65% (n=13)
EMA	0% (n=0)	1.9 rate/100 VT years 5% (n=1)	0% (n=0)	0% (n=0)	1.9 rate/100 VT years 5% (n=1)
IAP	2.2 rate/100 VT years 15% (n=3)	2.2 rate/100 VT years 15% (n=3)	0% (n=0)	0% (n=0)	4.4 rate/100 VT years 30% (n=6)

## TYPES

Medevacs are classified into three categories based on the severity of the condition:

- **Emergent:** Requires evacuation to a tertiary care facility within 24 hours to preserve life, limb, or eyesight (e.g., appendicitis, severe trauma, psychosis, or ectopic pregnancy).
- **Urgent:** Requires evacuation to a tertiary care facility within 72 hours to prevent the condition from deteriorating to an emergent status (e.g., *complicated infections or fractures requiring surgery*).
- **Non-urgent:** Involve situations where procedures or tests are not available locally or by telemedicine, such as advanced dental and other specialty care not available in country.

Of the 20 medical evacuations in 2022:

- 75 percent (n=15) were non-urgent
- 20 percent (n=4) were urgent
- 5 percent (n=1) were emergent (all evacuated to South Africa)
- There was one air ambulance medevac in 2022.

Table 5. Percent of Medical Evacuations by Type

	Non urgent	Urgent	Emergent	Total
Behavioral Health	25% (n=5)	5% (n=1)	0% (n=0)	30% (n= 6)
Medical	50% (n=10)	10% (n=2)	5% (n=1)	65% (n=13)
Dental	0% (n=0)	0% (n=0)	0% (n=0)	0% (n=0)
Medical & Behavioral Health	0% (n=0)	5% (n=1)	0% (n=0)	5% (n=1)
<b>Total</b>	<b>75%</b> <b>(n=15)</b>	<b>20%</b> <b>(n=4)</b>	<b>5%</b> <b>(n=1)</b>	<b>100%</b> <b>(n=20)</b>

Table 6. Percent of Medical Evacuations by Destination and Type

Destination	Non-Urgent	Urgent	Emergent	Total
D.C.	20 % (n=4)	10% (n=2)	0 % (n=0)	30% (n=6)
HOR	55 % (n=11)	5 % (n=1)	0% (n=0)	60% (n=12)
South Africa	0% (n=0)	5 % (n=1)	5% (n=1)	10% (n=2)
<b>Total</b>	<b>75%</b> <b>(n=15)</b>	<b>20%</b> <b>(n=4)</b>	<b>5 %</b> <b>(n=1)</b>	<b>100%</b> <b>(n=20)</b>

## MEDICAL EVACUATION BY DURATION AND TYPE

Non-urgent medevacs:

- Median: 44 days
- Mean  $\pm$  SD: 38.1  $\pm$  9.86
- Range: 20 to 48 days

Urgent medevacs:

- Median: 44 days
- Mean  $\pm$  SD: 4  $\pm$  18.67
- Range: 7 to 45 days

Emergent medevacs: There was only one case of an emergent medevac.

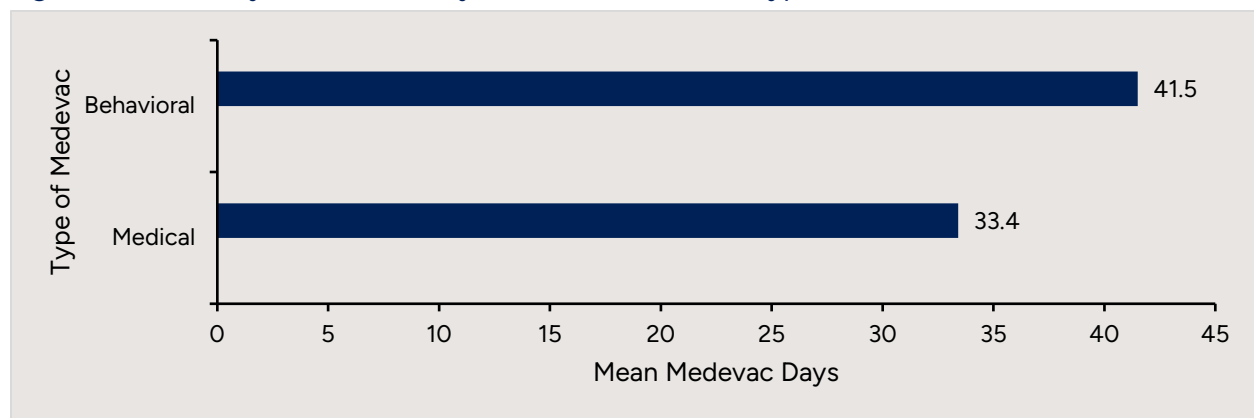

Table 7. Duration of Medical Evacuation by Type

Medevac Type	Number	Mean $\pm$ SD	Median	Range
Non-Urgent	15	38.1 $\pm$ 9.86	44	20-48
Urgent	4	4 $\pm$ 18.67	44	7-45
Emergent	1	-	-	-

The mean and median for medevac duration in total days by condition was highest for behavioral health conditions.

- Median: 44.0 days
- Mean 41.5 days

Figure 8. Mean Days Evacuated-by Medical Evacuation Type

## DISPOSITION

Following any medical evacuation, a Volunteer must be medically and administratively cleared before returning to their Peace Corps post to complete their service.

Reasons a Volunteer may not return to post to complete their service include:

- Need for ongoing medical or behavioral health care that is unavailable at post (medical separation).
- Volunteer elects to resign (early termination/interrupted service).
- Agency pursues a non-medical separation from service due to safety and security or other concerns.

Of the 20 medical evacuations, the majority (55 percent [n=11]) of Volunteers returned to post to complete their Peace Corps service; 40 percent were medically separated (n= 8); and only 5 percent (n=1) had an early termination (ET)/interrupted service. The disposition status following medical evacuation is summarized in Figure 9.

Figure 9. Disposition Status Following Medical Evacuation

## HOSPITALIZATIONS

### HOSPITALIZATION RATES

In 2022, the global incidence for in-country hospitalizations was 4.3 rate per 100 VT years (n=15), resulting in a total of 41 hospitalization days. This rate excludes hospitalizations that occurred while on medevac or vacation and hospital readmissions.

By region:

- AF: hospitalization rate of 5.5 per 100 VT years (n=9), 26 total hospitalization days
- EMA: hospitalization rate of 3.9 per 100 VT years (n=2); 7 total hospitalization days
- IAP: hospitalization rate at 2.9 per 100 VT years (n=4); 8 total hospitalization days

All hospitalizations took place between July and December 2022.

Figure 10. Incidence Rate of In-Country Hospitalizations by Year

The global mean length of stay and standard deviation for in-country hospitalizations was  $2.7 \pm 1.40$  days (median: 2.0; range: 1 – 6 days).

By region:

- AF: Mean length of hospital stay was  $2.9 \pm 1.54$  (median: 2.0 range 1 to 6 days)
- EMA: Mean length of hospital stay was  $3.5 \pm 0.71$  (median: 3.5; range 3 to 4 days)
- IAP: Mean length of hospital stay was  $2.0 \pm 1.41$  (median:1.5; range 1 to 4 days)

Figure 11. Mean Length in Days of In-Country Hospitalization by Region

## HOSPITALIZATION DIAGNOSES

Infectious diseases represented the highest proportion of hospital diagnoses, (n=6, 40 percent), which included:

- Lab confirmed influenza (n=3)
- Presumed malaria (n=1)
- Hepatitis (A, B, C, other) (n=1)
- Other febrile illness (n=1)

Gastrointestinal diseases were the second highest hospitalization diagnosis (n=3, 20 percent), which included:

- Undetermined diarrhea etiology (n=1)
- Gastroenteritis (n=2)

Gynecological conditions were the third highest hospitalization diagnosis (n=1, 6.7 percent), which included:

- Adnexal mass or ovarian cyst (n=1)

Figure 12. Percent of In-Country Hospitalizations by Diagnoses

See Appendix E: 2022 Hospitalization Data.

## IN-SERVICE DEATHS

There were no in-service deaths for the year 2022.

## POST-SERVICE CLAIMS

After they complete service, Returned Peace Corps Volunteers (RPCVs) have three years from the date of injury (or recognition of an illness as service-related) file claims under the Federal Employees' Compensation Act (FECA). Claims are filed, adjudicated, and paid for by the Department of Labor (DOL), Office of Workers' Compensation Programs (OWCP). The Peace Corps' FECA team assists RPCVs with locating DOL medical providers. RPCVs are responsible for facilitating the submission of injury claims to DOL.

In 2022, \$9,428,319 was paid on behalf of 560 injured/ill RPCVs for their medical expenses and monetary compensation. The total compensation amount is for all RPCVs receiving payment through DOL/OWCP in 2022 because of a Peace Corps service-related condition.

# APPENDIX

## APPENDIX A: 2022 VOLUNTEER RE-ENTRY TO POSTS

## APPENDIX B: LIST OF EPIDEMIOLOGY CODES

### Epi Category Code List (2022)

#### Behavioral health concerns

Adjustment difficulty  
Alcohol use concerns  
Cigarette smoker or tobacco user  
Concerns related to anxiety  
Concerns related to depressed mood  
Concerns related to eating behaviors  
Concerns related to grief  
Concerns related to identity or discrimination  
Concerns related to panic-like symptoms  
Concerns related to potential mania  
Concerns related to potential psychosis  
Concerns related to self-injury  
Concerns related to sleep  
Concerns related to specific fear  
Concerns related to stress after a trauma  
Concerns related to suicide  
COVID psychosocial factors  
Drug use concerns  
Excessive worries regarding health  
Experience of a trauma (sub-threshold or asymptomatic)  
Medical condition concerns  
New cigarette smoker or tobacco user  
Psychiatric medication management concerns  
Recurrence of pre-service behavioral health condition  
Relationship concerns  
Work related concerns

#### Behavioral health diagnoses

Acute stress disorder  
Adjustment disorder  
Alcohol use disorder  
Anxiety disorder  
Bipolar disorder  
Depressive disorder  
Eating disorder  
Other behavioral health diagnosis  
Personality disorder  
Posttraumatic stress disorder  
Psychotic disorder  
Self-injurious behaviors  
Substance use disorder  
Sub-threshold  
Suicidal behaviors

#### Cardiology

Elevated BP  
Hypertension, new onset  
Serious cardiac event

#### Dental

Dental abscess  
Dental caries  
Fracture of tooth  
Pericoronitis  
Temporomandibular joint disorder

#### Dermatology

Abscess of skin  
Actinic keratosis  
Alopecia (hair loss)  
Atopic dermatitis, exacerbation  
Cellulitis  
Contact dermatitis  
Infected/inflamed insect bite or sting  
Laceration of skin  
Tinea (Dermatophyte infection)

#### Endocrinology

Clinically significant weight gain (+10%)  
Clinically significant weight loss (-10%)  
Hyperthyroidism, new onset

#### Endocrinology (continued)

Hypothyroidism, new onset  
Thyroid nodule  
Type II diabetes mellitus, new onset

#### ENT

Bacterial pharyngitis  
Laryngitis  
Otitis externa  
Otitis media  
Upper respiratory tract infection  
Viral pharyngitis

#### Environmental

Air quality concern  
Water quality concern

#### Gastrointestinal

Amebiasis, lab-confirmed  
Appendicitis  
Diarrhea, bacterial lab-confirmed  
Diarrhea, etiology undetermined  
Diarrhea, parasitic lab-confirmed  
Diarrhea, viral lab-confirmed  
Gastroenteritis  
Gastroesophageal reflux disease  
Giardiasis, lab-confirmed  
Helminths

#### Gynecology

Abnormal cervical Papanicolaou smear  
Abnormal uterine bleeding  
Adnexal mass, or ovarian cyst  
Amenorrhea, primary or secondary  
Bacterial vaginosis  
Breast lump / mass  
Dysmenorrhea  
Emergency contraception  
Intrauterine contraceptive device, insertion  
Intrauterine contraceptive device, removal  
Oligomenorrhea  
Pelvic inflammatory disease  
Pregnancy  
Vaginal candidiasis  
Vaginitis

#### Hematology

Anemia  
Clotting disorder

#### Immunology

Adverse reaction to drug

#### Infectious diseases

Arboviral infection, lab-confirmed  
COVID-19 (SARS Corona Virus 2), lab-confirmed  
Dengue, lab-confirmed  
Filariasis, lab-confirmed  
Hepatitis (A, B, C, Other)  
Infectious mononucleosis, lab-confirmed  
Influenza, lab-confirmed  
Influenza-like illness  
Leishmaniasis, lab-confirmed  
Malaria, falciparum, lab-confirmed  
Malaria, falciparum, severe, lab-confirmed  
Malaria, non-falciparum, lab-confirmed  
Malaria, presumed  
Meningitis, infectious, lab-confirmed  
Other febrile illness  
Rabies post-exposure prophylaxis  
Schistosomiasis, lab-confirmed  
Tick-borne disease, lab-confirmed  
Tuberculosis, active, lab-confirmed  
Tuberculosis, latent infection  
Typhoid fever, lab-confirmed

#### Injuries

Animal bite or scratch  
Bicycle injury  
Burn  
Concussion  
Falling injury  
Motor vehicle occupant injury  
Motorcycle injury  
Needle stick injury  
Pedestrian injury  
Poisoning by drug, toxin, or other chemical  
Sports-related injury  
Traumatic injury due to assault

#### Musculoskeletal

Back pain  
Bursitis  
Dislocation  
Fracture of bone  
Joint pain, new onset  
Ligament or muscle tear  
Plantar fasciitis  
Sprain or strain  
Tendinitis

#### Neurology

Migraine headache  
Seizure

#### Oncology

Malignant neoplasm, lab-confirmed

#### Ophthalmology

Blepharitis  
Chalazion  
Conjunctivitis  
Corneal abrasion  
Hordeolum  
Keratitis  
Ocular condition associated with contact lens use

#### Procedures

Colonoscopy  
Colposcopy  
Esophagogastroduodenoscopy  
Major surgical procedure with general anesthesia

#### Pulmonary

Asthma, new onset or exacerbation  
Bronchitis  
Pneumonia

#### Sexually transmitted infections

Chlamydia, lab-confirmed  
Genital herpes  
Genital warts  
Gonorrhea, lab-confirmed  
HIV infection, new, lab-confirmed  
HIV post-exposure prophylaxis  
HIV pre-exposure prophylaxis  
Syphilis, lab-confirmed  
Trichomonas, lab-confirmed

#### Urology/nephrology

Epididymitis  
Prostatitis  
Pyelonephritis, lab-confirmed  
Urinary tract infection (UTI), lab-confirmed  
Urinary tract infection (UTI), presumed  
Urolithiasis, (urogenital stones), radiographically-confirmed  
Varicocele, hydrocele, or spermatocele
