This is the most up-to-date version of the 2017 Health of the Volunteer report and supersedes all previous versions published. Last updated: December 19, 2019.

## Introduction

*The Health of the Volunteer* annual report is produced by the Epidemiology and Surveillance Unit of Peace Corps' Office of Health Services (OHS). This report provides information on health conditions experienced by Peace Corps Volunteers, Trainees, Global Health Service Partnership Volunteers, and Peace Corps Response Volunteers during the calendar year and is intended for use by Peace Corps Medical Officers (PCMOs), Volunteers, and agency staff.

*The Health of the Volunteer 2017* reflects OHS' mission to monitor and evaluate trends in global and regional health conditions among Peace Corps Volunteers and Trainees. Highlights from 2017, along with details reflecting reported conditions and events, are included in this volume. Appendices have extended figures, maps, tables, and country-specific data.

The report is designed to facilitate the education and training of Volunteers and staff and to enhance prevention efforts. This volume, additional tables, and previous reports may be accessed via the Peace Corps Intranet on the Epidemiology page.

**Important note:** While *Health of the Volunteer 2015* and earlier reports relied on Epidemiologic Surveillance System data submitted through the monthly, paper-based surveillance system, *Health of the Volunteer 2017* uses data from the electronic health record, PCMEDICS. Historical rates (2015 and earlier) may differ from 2016 and 2017 as a result of changes in data collection practices and code definitions.

## Healthy Volunteer 2020

In 2016, a new initiative called *Healthy Volunteer 2020* was launched to monitor indicators of Volunteer health and the Peace Corps' health

care system, and to provide targets that the agency is working to achieve by 2020.

Based on the U.S. Department of Health and Human Services' *Healthy People* initiative, *Healthy Volunteer 2020* marks the first time that the agency has taken a collaborative approach to address a set of defined, measurable indicators of Volunteer health and Peace Corps health care.

Throughout this report, progress on several of the 11 indicators is displayed with a color-coded depiction of progress made in 2017, compared to baseline and the 2020 target; an example is below. A green check mark indicates that the target has been met; a blue wheel indicates that the indicator is on track to meet the target in the future; and a red octagon indicates that the indicator has moved further from the target.

A comprehensive separate report on the progress made in 2017 on the health indicators initiative will be forthcoming.

<b>Example: Healthy Volunteer 2020 Indicator: Reduce the rate of confirmed malaria</b>		
<b>Baseline (2014)</b>	<b>2017</b>	<b>2020 Target</b>
2.1 cases per 100 malaria VT years	1.5 cases per 100 malaria VT years 	1.6 cases per 100 malaria VT years

## Data Methods

### Data Sources

Information used to prepare this report was provided by various staff throughout the world. PCMOs submitted Epidemiologic Surveillance System (ESS) codes through Peace Corps'

Medical Electronic Documentation and Inventory Control System (PCMEDICS), which is Peace Corps' electronic health record (Appendix A).

Data on all 158 ESS codes are available in Appendix E of this report, while the text highlights infectious and noninfectious conditions of interest by body system. Accommodation data were extracted from PCMEDICS. Post-service claims data were provided through the Office of Medical Services (OMS) Post-Service Unit. Information on mental health consultations was collected by the Counseling and Outreach Unit (COU) in the Office of Health Services (OHS).

Throughout this document the term "Volunteer" includes Peace Corps Volunteers and Trainees, as well as Peace Corps Response Volunteers and Global Health Service Partnership Volunteers.

## **Data Analysis**

### ***Incidence Rates***

Incidence is the number of new cases of a disease or condition. Incidence rate is the proportion of new cases within the population at risk.

In *The Health of the Volunteer*, incidence rates are expressed per 100 Volunteer-Trainee years (VT years). These rates are calculated by dividing the number of new cases of disease in a year by the VT year count and then multiplying by 100.

$$\text{Rate in VT years} = \left( \frac{\text{Number of new cases of disease}}{\sum (\text{Time each Volunteer served in years})} \right) \times 100$$

### ***Volunteer/Trainee Years***

VT years reflect both the number of Volunteers and the length of time each Volunteer served. As Volunteers may serve less than a full calendar year, calculating VT years is more accurate than counting individual Volunteers.

### ***Female Volunteer Years***

Rates for pregnancy, gynecological conditions, and colposcopies are given per 100 female VT

years. Since these conditions affect only females, male Volunteers have been excluded from the denominator in these calculations.

### ***Malaria Volunteer Years***

Rates for malaria (by type) are given per 100 malaria VT years. As these conditions typically affect only Volunteers in countries with endemic malaria, Volunteers serving in non-endemic countries have been excluded from the denominator in these calculations. Countries listed as malaria endemic are those countries in which at least some Volunteers are required to take malaria prophylaxis medication on an ongoing basis throughout service because of the risk of malaria. Where malaria was endemic in only certain regions within a country, the total number of Volunteers serving in that country were counted in the denominator.

### ***Schistosomiasis Volunteer Years***

Rates for schistosomiasis antibodies and parasite/eggs are given per 100 schistosomiasis VT years. Since these conditions typically affect only Volunteers in countries with endemic schistosomiasis, Volunteers serving in countries without schistosomiasis have been excluded from the denominator in these calculations.

### ***Dengue Volunteer Years***

Rates for dengue are given per 100 dengue VT years. Since these conditions typically affect only Volunteers in countries with endemic dengue, Volunteers serving in countries without dengue have been excluded from the denominator in these calculations.

### ***Trend Lines***

Figures that show incidence rates over time display trend lines to emphasize tendencies in data direction.

## **Data Limitations**

There are several limitations to the information presented in this report. If Volunteers do not seek health care from the PCMO, the number of reported cases may not reflect the actual burden of disease. The electronic data collection system through PCMEDICS expanded the number of

reportable conditions through the ESS. If cases were not coded with a SNOMED code or an Epi code, then they were not captured in the ESS. Conditions diagnosed on medevacs that lead to medical separation may not be completely captured in the ESS, as medical care is transitioning to providers outside of the Peace Corps health care system.

Not all conditions can be precisely confirmed, so some reported cases may be misclassified. In addition, presumptive cases that were subsequently confirmed may have been misclassified if the record was not updated to reflect the laboratory and/or diagnostic findings.

Incidence rates based on small numbers of cases (20 or less) should be interpreted with caution since a change of a few cases can produce a large change in rate. Most country-specific rates fall into this category. In the figures provided, counts are given instead of rates when the number of cases in one or more categories is less than 20.

Due to rounding, percentages may not appear to equal 100 percent.

## **2017 Changes**

### *Changes to Peace Corps Countries*

Peace Corps served in 61 posts, representing 65 countries, in 2017. Burkina Faso suspended its activities in September 2017. No new posts opened during the calendar year.

### *OHS changes*

In 2017, a new contract with an insurance provider allowed for improved data collection and reporting on certain health care costs and air ambulance use, reported in the section of this report on medevacs.

## **2017 Highlights**

### **Notable**

#### [Decrease in dengue, chikungunya, and Zika](#)

The rate of dengue decreased 78 percent from 2016 (1.8 cases per 100 dengue VT years) to 2017 (0.4 cases per 100 dengue VT years); the

difference was statistically significant ( $p < 0.05$ ). Beginning in 2016, data were collected on chikungunya virus infection and Zika virus infection. Dengue, chikungunya, and Zika are spread by the same species of mosquitoes, and may have similar presentations in infected patients.

In 2017, there were no cases of chikungunya fever reported in Volunteers. There was 1 case of Zika reported in 2017 in a Guatemala Volunteer. As this only included lab-confirmed cases of Zika virus infection, the actual number of infected Volunteers may have been higher.

#### [Increase in behavioral health issues reported by PCMOs](#)

For the second year in a row, behavioral health issues, defined as support requested from PCMOs for concerns such as adjustment issues, relationships, stress, and loneliness, increased in 2017, with the rate rising from 23.5 cases per 100 VT years in 2016 to 28.8 cases per 100 VT years in 2017; this increase was statistically significant ( $p < 0.05$ ). Reducing the rate of adjustment difficulty, one of the epidemiologic conditions reported through the ESS, became part of the agency's [Strategic Plan FY 2018-22](#) in order to quantify efforts to increase Volunteer resilience.

#### [Enhanced data collection of unintentional injuries in 2017](#)

The overall unintentional injury rate in 2017 was 15.3 injuries per 100 VT years. This was 35 percent greater than the rate in 2016 (11.3 injuries per 100 VT years). While the difference was statistically significant ( $p < 0.05$ ), a change in the data review process may have led to more cases being captured in the ESS. Among the 1,074 unintentional injuries reported in 2017, 29 percent were classified as falling injuries. Animal bites or scratches accounted for 26 percent of the injuries, sports-related injuries 22 percent, and bicycle injuries 8 percent. The overall rate of road traffic injuries (pedestrian, bicycle, motorcycle, and motor vehicle occupant) among

Volunteers was similar in 2017 (2.3 cases per 100 VT years) to the previous year (2.0 cases per 100 VT years).

## Publications

In 2017, OHS staff co-authored one article published in a peer-reviewed journal:

[Long term health outcomes among Returned Peace Corps Volunteers after malaria prophylaxis, 1995-2014.](#) Travel Medicine and Infectious Disease. 2017; 17:50-55.

## Feedback

Comments on the content of this report and suggestions to enhance its usefulness, especially as a training tool for Volunteers/Trainees, are encouraged. Please direct feedback to the Epidemiology and Surveillance Unit at [EpiUnit@peacecorps.gov](mailto:EpiUnit@peacecorps.gov).

## Results

### Volunteer demographics

In calendar year 2017, Peace Corps Volunteers, Trainees, Global Health Service Partnership, and Peace Corps Response Volunteers served a total of 7,011 Volunteer-Trainee years (VT years).<sup>\*</sup> The mean and median age of Volunteers (ages 19-82) who served in 2017 were 27 and 24, respectively.

Female Volunteers served 4,340 VT years, accounting for over half of the total VT years served (61.9 percent).

<sup>\*</sup>Data accessed January 31, 2018.

Of the total VT years served in 2017, 416 VT years (5.9 percent) were served by Volunteers age 50 and over.

### Most common conditions

Infectious gastrointestinal conditions (gastroenteritis) continue to be the most commonly reported condition in the Peace Corps. In 2017, 46.9 cases of gastrointestinal illness per 100 VT years were reported, while respiratory, pulmonary, and ear, nose & throat conditions ranked second, with a rate of 43.1 cases reported per 100 VT years.

### Conditions with significant rate differences

Among the categories of illness and injury affecting Volunteers in 2017, 8 conditions had statistically significant differences in rate from 2016 to 2017 (p-value <0.05).

The rate of reported behavioral health issues increased 23 percent from 2016 to 2017. Rates of latent tuberculosis infection, unintentional injuries, dental issues, musculoskeletal conditions, and respiratory conditions/ENT also increased. Improved data review may have contributed to higher numbers of cases of musculoskeletal conditions and injuries captured in the ESS. The rate of infectious gastroenteritis in Volunteers worldwide decreased 8 percent from 2016 to 2017, and the rate of dengue per 100 dengue VT years decreased 78 percent.

### Behavioral health issues

A behavioral health issue reported through the ESS is a one-on-one discussion (in person or by telephone) with a PCMO to receive support in the form of empathetic interactions and minor skill building to address factors such as adjustment issues, problems with interpersonal relationships, reactions to stress, and loneliness.

The incidence of reported behavioral health issues (excluding substance use concerns and experience of a trauma) increased from 23.5 issues per 100 VT years in 2016 to 28.8 issues per 100 VT years in 2017; this increase was statistically significant (p<0.05).

\*Excludes substance use, cigarette smoking, and experience of a trauma.

Worldwide, the most commonly reported behavioral health issues were concerns related to anxiety (530 cases, 26 percent), adjustment difficulty (441 cases, 22 percent), and concerns related to depressed mood (306 cases, 15 percent). The rate of adjustment difficulty was highest in the IAP region (7.5 issues per 100 VT years), followed by EMA (6.1 issues per 100 VT years) and Africa (5.7 issues per 100 VT years); the difference between the IAP region and the Africa region rates was statistically significant ( $p < 0.05$ ).

### *Alcohol and drug use*

The rate of substance use concerns reported through PCMEDICS, which included alcohol and drug use, was 1.4 cases per 100 VT years. This does not include cases of substance use concerns that were not referred to the PCMO. All but one of the cases were alcohol-related. The rate of substance use concerns was highest in the Africa region (1.5 cases per 100 VT years), followed by IAP (1.3 cases per 100 VT years) and EMA (1.1 cases per 100 VT years). The rate of alcohol-related concerns (defined as alcohol intoxication, alcohol withdrawal delirium, binge drinking, and risky alcohol use) (1.3 cases per 100 VT years) was greater than the rate of alcohol-related problems reported in 2016 (1.1 cases per 100 VT years). Prior to 2016, alcohol-related problems included any incident in which behavior was altered or impaired due to alcohol intoxication, except for an injury, and included incidents observed by staff, Volunteers, Trainees, or any reliable source. In 2016 and 2017, third

party reports to PCMOs of alcohol-related concerns would no longer be reported through the ESS without PCMO follow-up and direct assessment of the Volunteer.

In the 2017 Annual Volunteer Survey, 45 percent of Volunteer respondents reported binge drinking (5 or more drinks per session [males] or 4 or more drinks per session [females]) at least once in the last 30 days. This percentage was higher in the Africa region (47 percent), followed by the IAP region (46 percent) and the EMA region (42 percent). Due to a change in the measurement of binge drinking in 2017 to improve comparability with U.S. population measurements of alcohol use and binge drinking, the percentage of respondents who reported engaging in binge drinking increased substantially from 2016 to 2017. As a result, the 2020 Target has been readjusted to reflect the new measurement. The Annual Volunteer Survey captures self-reported alcohol use, which differs from alcohol use reported by PCMOs through the ESS.

<b>Healthy Volunteer 2020 Indicator: Reduce the percentage of Volunteers who report binge drinking</b>		
<b>Baseline (2014)</b>	<b>2017</b>	<b>2020 Target</b>
See note above	45% 	42%

## Tobacco use

In the 2017 Annual Volunteer Survey, 17 percent of Volunteer respondents reported that they smoked on one day per month or more during a typical month in their service. Ten percent of Volunteer respondents reported they smoked on 4 days per month or more during a typical month in their service. There were minor regional differences among Volunteers' responses (18 percent Africa, 16 percent EMA, 14 percent IAP for 1x/month or more; 12 percent Africa, 10 percent EMA, 8 percent IAP for 4x/month or more) and in comparison to the 2016 Annual Volunteer Survey results.

<b>Healthy Volunteer 2020 Indicator: Reduce the percentage of Volunteers who report smoking cigarettes (1x/month or more)</b>		
Baseline (2014)	2017	2020 Target
18%	17% 	16%

Regional maps of country rates of smoking (4x/month or more) can be viewed in Appendix F.

## Counseling and Outreach Unit

### Mental health sessions in CY 2017

The Counseling and Outreach Unit (COU) maintains records of mental health sessions it provides to Volunteers and Trainees. COU consults are indicated when the level of support needed by a Volunteer exceeds the support available in country. Sessions take place either over the telephone or in person while on medevac at Peace Corps headquarters. Counseling services provided by in-country providers to PCVs are not reported in the ESS.

Symptoms leading to a session may include depression, anxiety, experience of trauma, alcohol or drug problems, behavioral problems, or other mental health concerns. Information on COU mental health sessions was first included in the 2007 Health of the Volunteer report.

In 2017, there were 676 COU mental health cases for a rate of 9.6 cases seen by COU per 100 VT years. This was a 9 percent decrease in the rate from 2016; the difference was not statistically significant ( $p>0.05$ ).

Among the 1,679 mental health sessions, there were 1,532 telephone sessions (21.9 per 100 VT years) and 147 headquarters sessions (2.1 per 100 VT years).

There were 15 site visits conducted by COU clinicians, and each site visit included a standardized 2-day Peer Support Network (PSN) training. COU also conducted 60 in-country sessions with 39 individual Volunteers in response to large-scale emergencies and natural disasters. These sessions were in response to the Burkina Faso suspension of activities, the Hurricane Maria evacuation of Dominica, The Gambia consolidation, and the deaths of Volunteers in Armenia, Malawi, and Panama. In addition to in-country sessions following the death of a Volunteer, COU sends a representative to Peace Corps memorial services for fallen Volunteers and funeral services in the U.S.

The conditions most frequently diagnosed by COU staff in 2017 were adjustment disorder (172 cases, 25 percent), depressive disorder (81 cases, 12 percent), and posttraumatic stress disorder (44 cases, 7 percent) (Appendix C, Table 6). Thirty-two percent of cases (213 cases) referred to COU did not result in a diagnosis.

The most frequently diagnosed conditions among the 178 cases resulting in a medevac were

adjustment disorder (38 cases, 21 percent), depressive disorder (30 cases, 17 percent), and posttraumatic stress disorder (22 cases, 12 percent).

**Respite leave:** Respite leave is granted in cases where the leave may provide appropriate respite, recovery or resolution to a traumatic event the Volunteer has experienced. In cases where medical care is required, medevac should be used. In 2017, 45 Volunteers were granted respite leave.

## Dental issues

Dental issues reported through the ESS in 2017 included dental abscesses; dental caries; tooth fractures; and temporomandibular joint disorder. The total rate of dental issues was 7.3 cases per 100 VT years (509 cases). This represents a 24 percent increase from the rate in 2016 (5.9 cases per 100 VT years). Dental caries represented the greatest proportion of dental issues reported, with 242 cases. Since 2016 marked the first year that these Epi codes were in use, any potential trends will continue to be monitored in the future.

## Dermatologic conditions

### Infectious dermatitis

Infectious dermatitis was the sixth most commonly reported condition among Volunteers worldwide in 2017 with a rate of 19.4 cases per 100 VT years. This was similar to the rate in 2016 of 18.5 cases per 100 VT years.

Infectious dermatitis includes bacterial skin infections (471 cases in 2017); tinea (445 cases); skin abscesses (238 cases); cellulitis (152 cases); and impetigo (51 cases). Noninfectious skin conditions such as eczema or non-specific rashes were not included. Prior to 2016, infectious dermatitis was not reported by separate diagnoses, and included any infection of the skin by bacterial, fungal, or parasitic organisms.

The rate of infectious dermatitis was higher in the IAP region (21.7 cases per 100 VT years) than the Africa region (20.6 cases per 100 VT years) and significantly higher than in the EMA region (15.1 cases per 100 VT years) ( $p < 0.05$ ). This difference was polyfactorial, rather than an increase in a single condition.

### Other dermatologic conditions

Insect bites or stings were a leading condition affecting Volunteers worldwide in 2017, with a rate of 8.2 cases per 100 VT years. The rate was significantly higher ( $p < 0.05$ ) in the IAP region (10.1 cases per 100 VT years), compared to the Africa region (7.7 cases per 100 VT years) and EMA region (7.3 cases per 100 VT years).

Data on other non-infectious dermatologic conditions, including contact dermatitis, actinic keratosis, and alopecia, are reported in Appendix E.

## Endocrine conditions

In 2017, there were 5 cases of new onset of hypothyroidism, 2 cases of new onset of hyperthyroidism, and 7 cases of thyroid nodules. Hypothyroidism and hyperthyroidism result from a deficiency or excess, respectively, of thyroid hormone, which plays an important role in metabolism.

There were 49 reports of clinically significant weight loss (5 percent loss), and 10 cases of clinically significant weight gain (5 percent gain). There was 1 case of new onset of Type II diabetes mellitus.

## Gastrointestinal conditions

### Gastroenteritis

Gastroenteritis includes laboratory-confirmed and non-laboratory-confirmed illnesses.

While the rate of gastroenteritis declined 8 percent from 2016 and the difference was statistically significant ( $p < 0.05$ ), this category continues to be the most reported condition among Volunteers, with a rate of 46.9 cases per 100 VT years in 2017.

Healthy Volunteer 2020 Indicator: Reduce the rate of gastroenteritis		
Baseline (2014)	2017	2020 Target
46.0 cases per 100 VT years	46.9 cases per 100 VT years 	43.7 cases per 100 VT years

Presumed bacterial diarrhea captures infections of the gastrointestinal tract of a presumed microbial origin in which antibiotic treatment was administered but etiology was not lab-confirmed. Bacterial agents included in this category are those that do not apply to other ESS categories (e.g., salmonellosis or shigellosis). Among the 3,289 gastroenteritis cases reported in 2017, 32 percent (1,047 cases) were of presumed bacterial origin.

Presumed viral diarrhea includes infections of the gastrointestinal tract due to a viral species determined by a clinical presentation consistent with viral infection that is not confirmed by laboratory testing. Beginning in 2016, cases of viral gastroenteritis were collected separately, and were defined as infections of the gastrointestinal tract presumed to be caused by a viral species resulting in diarrhea and nausea/vomiting.

Among cases of gastroenteritis reported, 27 percent (888 cases) were presumed viral diarrhea and 24 percent (786 cases) were viral gastroenteritis.

Cases of diarrhea of presumed parasitic origin included cases with clinical features of a disease whose etiology was not laboratory confirmed. Collectively, these cases represented 8 percent (264 cases) of gastroenteritis.

Furthermore, among the 3,289 cases of gastroenteritis reported in 2017, 4 percent were confirmed amebiasis, 3 percent were confirmed giardiasis, 2 percent were confirmed intestinal helminths, <1 percent was confirmed bacterial diarrhea, <1 percent was confirmed salmonellosis, and <1 percent was confirmed shigellosis.

### *Other gastrointestinal conditions*

Nine cases of appendicitis were reported through the ESS in 2017: 3 each in the Africa region, IAP region, and EMA region. These include cases of appendicitis that were treated in-country and on medevac. Appendicitis was the sixth-leading reason for in-country hospitalizations in Volunteers worldwide in 2017.

The rate of gastroesophageal reflux disease (GERD) worldwide was 1.7 cases per 100 VT years (118 cases). GERD can cause symptoms such as heartburn, regurgitation, and difficulty swallowing.

## **Gynecological conditions**

### *Gynecological infections*

Gynecological infections include bacterial vaginosis, vaginitis, vaginal yeast infections, and pelvic inflammatory disease. This total differs from all gynecological conditions displayed in Figure 4 because it does not include non-infectious conditions and procedures. Sexually transmitted infections are described in a later section.

The rate of gynecological infections was 16.2 cases per 100 female VT years in 2017. Of these cases, 64 percent (448 cases) were vaginal yeast infections; 19 percent (136 cases) were vaginitis; 14 percent (96 cases) were bacterial vaginosis; and 3 percent (22 cases) were pelvic inflammatory disease.

### *Other gynecological conditions and procedures*

**Intrauterine contraceptive devices:** There were 174 reports of intrauterine contraceptive device (IUD) insertions (4.0 procedures per 100 female VT years), and 34 reports of IUD removals (0.8 procedures per 100 female VT years) in female Volunteers worldwide in 2017. These codes capture cases in which the IUD was inserted or removed while the Volunteer was in service. An IUD is a small device that is placed in the uterus, can last 3-10 years, and is very effective at preventing pregnancy. Noncontraceptive benefits of copper IUDs include continued menstrual cyclicity. IUDs must be placed by a Peace Corps-approved gynecologist; not all posts have a qualified consulting gynecologist in-country.

### *Pregnancies*

In 2017, there were 38 pregnancies among female Volunteers for a rate of 0.9 pregnancy per 100 female VT years. The rate of pregnancies was highest in the IAP region (1.4 pregnancies per 100 female VT years), followed by Africa (0.9 pregnancies per 100 female VT years) and EMA (0.4 pregnancy per 100 female VT years). The numbers of intentional and unintentional pregnancies were not reported.

## Colposcopies

Colposcopy is a medical procedure used to diagnose the cause of abnormal Pap smears in women. In 2008, the number of in-country colposcopies performed was tracked for the first time.

PCMOs must count and report any colposcopy performed in the Volunteer's country of service at a clinic, hospital, or facility authorized by medical staff for the diagnosis and/or treatment of a gynecological condition.

These data do not reflect colposcopies performed in another country or region (e.g., on medevac to another country which are reported elsewhere).

A total of 21 in-country colposcopies were reported in 2017. This is the same number of colposcopies performed in 2016.

## Infectious diseases

### Dengue, Chikungunya, and Zika

Dengue is a viral disease transmitted to humans by infected *Aedes* mosquitoes. Symptoms include high fever, severe headache, and joint and muscle pain. Dengue infection is a leading cause of illness and death in the tropics and subtropics. Up to 50-100 million infections are now estimated to occur annually.

The rate of reported dengue cases was 0.4 cases per 100 dengue VT years, a 78 percent decrease from the rate in 2016 (1.8 cases per 100 dengue VT years). This change was statistically significant ( $p < 0.05$ ).

IAP accounted for 12 (55 percent) of the 22 cases seen in 2017, with 4 cases reported in Samoa, 4 in Vanuatu, and 1 each in Fiji, Nicaragua, Panama, and Peru. EMA reported 10 cases (45 percent) with an incidence rate of 1.6 cases per 100 dengue VT years, which was the highest rate of the three regions in 2017. The cases occurred in the Philippines (5 cases), Timor-Leste (4 cases), and Indonesia (1 case). Dengue was the second-leading cause of in-country hospitalization in Volunteers in the EMA region. No cases of dengue were reported in Volunteers in the Africa region.

Maps of the rate of dengue infections can be viewed in Appendix F.

Beginning in 2016, data were collected on chikungunya virus infection and Zika virus infection. Dengue, chikungunya, and Zika are spread by the same species of mosquitoes, and

may have similar presentations in infected patients.

In 2017, there were no cases of chikungunya fever reported in Volunteers. There was 1 case of Zika reported in 2017 in a Guatemala Volunteer. As this only included lab-confirmed cases of Zika virus infection, the actual number of infected Volunteers may have been higher.

### Botfly infection

There was one case of botfly infection reported in a Panama Volunteer. The botfly (*Dermatobia hominis*) larvae penetrates the skin, resulting in a lesion.

### Filariasis

Filariasis is a group of parasitic diseases caused by microscopic, threadlike worms. Lymphatic filariasis is contracted through the bite of an infected mosquito and can cause swelling (lymphedema), as well as thickening, hardening, and disfiguration of the skin (elephantiasis), usually affecting the limbs, breasts, and genitals. Onchocerciasis (river blindness) is contracted through the bite of an infected black fly and can cause inflammation, while chronic infection can produce blindness. *Loa loa*, or African eye worm, is contracted through the bite of an infected horsefly and can cause lymphedema, itching, inflammation, and migration of worms through the eyeballs.

In 2017, one case of filariasis (*Loa loa*) was reported in a Cameroon Volunteer.

### Hepatitis

Hepatitis A is contagious liver disease transmitted by person-to-person contact or from consumption of contaminated food or water. Hepatitis B & C are usually transmitted by blood or sexual contact. Per Peace Corps Technical Guideline 300, all Volunteers must be immunized against Hepatitis A & B. There were no reported cases of Hepatitis A, B, or other hepatitis infections in Volunteers in 2017.

### Influenza-like illness

Cases of influenza-like illness were first collected in 2016. Influenza-like illness is defined as an illness with the symptoms of influenza, but no laboratory test confirming the diagnosis of influenza. There were 96 cases reported in 2017, for a rate of 1.4 cases per 100 VT years. The rate was highest in the Africa region (1.8 cases per

100 VT years), followed by the EMA region (1.1 cases per 100 VT years) and IAP region (0.9 cases per 100 VT years). There was only 1 laboratory confirmed case of influenza in 2017.

### Human immunodeficiency virus

In 2017, two Volunteers tested positive for human immunodeficiency virus (HIV) infection.

In 1987, Peace Corps initiated HIV screening for Volunteers. Commencing in 1989, HIV screening has been done both prior to and at the end of service, and as needed based on risk. Since 1989, 56 Volunteers have had a new HIV conversion during service. HIV-positive Volunteers can apply and serve in a number of countries, however these volunteers who were infected with HIV before service are not reported in this graph. Maps of HIV infection rates over the past 10 years can be viewed in Appendix F.

### HIV post-exposure prophylaxis

HIV post-exposure prophylaxis (PEP) was prescribed to prevent possible HIV exposure per CDC guidelines to 84 Volunteers for a rate of 1.2 prescriptions per 100 VT years in 2017. In the Africa region, the rate of PEP prescriptions remained the same from 2016 to 2017, with 2.1 prescriptions per 100 VT years. The EMA region reported a decrease from 0.9 to 0.4 prescriptions per 100 VT years, and in IAP, the rate of PEP prescriptions in 2017 (0.4 prescriptions per 100

VT years) was similar to 2016 (0.3 prescriptions per 100 VT years).

PEP has been available to Volunteers potentially exposed to HIV since 1997. Data on PEP use was first collected in 2006.

A map of post-exposure prophylaxis prescription rates regionally can be viewed in Appendix F.

### Leishmaniasis

Leishmaniasis is a parasitic disease spread to humans through the bite of infected sand flies. The two most common forms are cutaneous, which produces skin sores, and visceral, which affects internal organs such as the spleen, liver, and bone marrow.

In 2017, there was 1 case of cutaneous leishmaniasis in a Panama PCV.

## Malaria

Healthy Volunteer 2020 Indicator: Reduce the rate of confirmed malaria		
Baseline (2014)	2017	2020 Target
2.1 cases per 100 malaria VT years	1.5 cases per 100 malaria VT years	1.6 cases per 100 malaria VT years
		

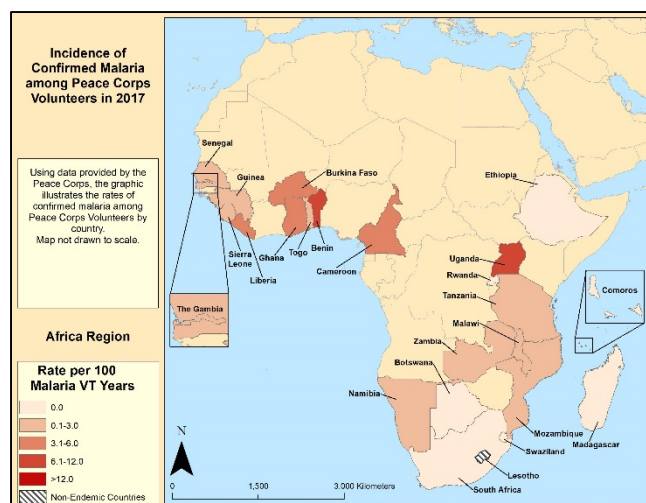

The rate of confirmed malaria (*P. falciparum* and non-*P. falciparum*) was 1.5 cases per 100 malaria VT years (70 cases); this was similar to the rate in 2016 (1.3 cases per 100 malaria VT years). The overall rate of confirmed and presumptive malaria in 2017 was 2.7 cases per 100 malaria VT years (126 cases).

In 2017, all confirmed cases of malaria occurred in the Africa region. All but 3 cases of presumptive malaria occurred in the Africa region.

Nineteen countries in Africa reported confirmed or presumptive malaria cases; however, 3 countries (Benin, Uganda, Zambia) accounted for 50 percent of cases in the Africa region.

*Figure 22.1 Map of confirmed malaria incidence rates in Africa*

Of the 123 reported malaria infections among Africa Volunteers, 56 percent (69 cases; a rate of 2.2 cases per 100 malaria VT years) were confirmed *Plasmodium falciparum*, 43 percent (53 cases; a rate of 1.7 cases per 100 malaria VT years) were presumptive malaria, and 1 percent (1 case; a rate of <0.1 cases per 100 malaria VT years) were confirmed as non-*Plasmodium falciparum* species.

In 2016, cases of complicated (severe) *P. falciparum* malaria began to be routinely collected as part of the ESS. Complicated malaria occurs when the patient develops symptoms such as changes in consciousness, seizures, and/or bleeding, as a result of malaria. Complicated malaria is a serious medical emergency that can result in death if untreated.

One case of complicated malaria was reported in the Africa region in 2017 in a Togo Volunteer.

### *Antimalarial chemoprophylaxis*

Before 2016, the ESS tracked the number of Volunteers taking long-term antimalarial chemoprophylaxis each month. Short-term use, defined as less than 30 days (e.g., for travel), was not recorded. This allowed for estimates of average yearly use to be calculated, as well as to generate rates of malaria on antimalarial chemoprophylaxis. In 2016 and 2017, data on chemoprophylaxis use was not systematically collected from PCMEDICS, however, information on chemoprophylaxis use was available for cases of reported presumptive and confirmed malaria.

In 2017, among the 126 Volunteers who were diagnosed with confirmed or presumptive malaria and who were documented to have been prescribed antimalarial chemoprophylaxis, 13 percent were prescribed mefloquine, 33 percent were prescribed doxycycline, and 54 percent were prescribed atovaquone/proguanil (Malarone).

In July 2013, the FDA issued a black box warning for mefloquine due to the drug's possible neurologic and psychiatric side effects. In August 2013, a new Peace Corps policy surrounding prophylaxis usage was implemented wherein Volunteers are offered their choice of prophylaxis after being counseled on the available options. Volunteers who choose to take mefloquine are required to sign a form acknowledging that they have reviewed the mefloquine medication guide and will promptly report any possible side effects to their PCMO, who may prescribe an alternative prophylactic medication.

### *Rabies post-exposure prophylaxis*

Rabies post-exposure prophylaxis is a series of vaccines given after a Volunteer is bitten or scratched by an animal with an unknown rabies history. Volunteers serving in countries with endemic rabies and countries with low rabies endemicity where it is common to have contact with stray animals should receive pre-exposure vaccination against rabies as well.

In 2016, the administration of rabies post-exposure prophylaxis became a reportable event through the ESS. A total of 193 reports were made in 2017, for a rate of 2.8 cases per 100 VT years worldwide. The rate was highest in the EMA region, with 3.7 cases per 100 VT years. There has not been a rabies-related death in a Volunteer or Trainee in more than 30 years.

### Schistosomiasis

Schistosomiasis is a parasitic disease caused by flatworms that penetrate the skin of people who swim or wade in contaminated water. Many schistosomiasis infections are asymptomatic. Acute and chronic infections can produce progressive damage to the bladder, ureters, and kidneys (urinary schistosomiasis), as well as progressive enlargement of the liver and spleen, with intestinal damage and hypertension of the abdominal blood vessels (intestinal schistosomiasis).

In 1998, the Peace Corps instituted universal schistosoma antibody screening for Volunteers completing service in endemic areas; however, in 2012, empiric treatment for Volunteers at COS was implemented in endemic countries in Africa in place of universal screening.

All laboratory confirmed cases of schistosomiasis during service were reported in the Africa region in 2017. There were 3 cases of schistosomiasis diagnosed by ova and parasite assay and 51 by antibody assay in 2017. Cases of schistosomiasis were reported in Madagascar, Mozambique, and The Gambia (1 case each). Nine countries reported positive antibody tests in Africa. Of these, the highest was Uganda (13 cases).

The rate of schistosomiasis antibodies in 2017 was 1.5 cases per 100 schistosomiasis VT years. This was less than the rate of schistosomiasis antibodies in 2016 (1.9 cases per 100 schistosomiasis VT years); the difference was not statistically significant.

Regional maps of country rates of schistosomiasis antibodies and symptoms can be viewed in Appendix F.

### Tuberculosis

Tuberculosis remains a leading cause of death for people worldwide. Early detection of latent TB infection (LTBI) and prevention of active tuberculosis are essential to reducing the mortality risk from this disease. The ideal way to achieve these goals is to establish a screening program.

Either a purified protein derivative (PPD) skin test or an interferon-gamma release assay (IGRA) blood test is used to detect exposure to tuberculosis. IGRA tests are not available in some countries.

If an individual has been exposed to someone with active tuberculosis infection, the PPD skin test or IGRA will likely be read as positive. PPD converters are at increased risk for developing active tuberculosis and in most cases receive tuberculosis chemoprophylaxis treatment to minimize this risk.

Volunteers are tested for tuberculosis with the PPD skin test or IGRA during the application process, at close of service, and after any

significant exposure. In addition, in 2016, a recommendation was added to the Technical Guideline on tuberculosis to screen Volunteers at mid-service based on the WHO classification of prevalence in their country of service and if clinically indicated.

In 2017, 70 Volunteers were diagnosed with latent tuberculosis for a rate of 1.0 LTBI per 100 VT years. This was a statistically significant increase from the rate in 2016 (0.5 cases per 100 VT years,  $p < 0.05$ ).

In 2017, there were no cases of active tuberculosis among Volunteers. Since 2008 a total of nine cases of active tuberculosis have been reported. Four of the 9 tuberculosis cases were from the EMA region, three were from the Africa region, and two were from the IAP region.

## Injuries, unintentional

Unintentional injuries are reported if they require medical evaluation or treatment by the PCMO or other health care professional.

This category includes a number of codes added in 2016, including animal bites or scratches; burns; falling injuries; heat exhaustion; and needle stick injuries. Data on pedestrian injuries, bicycle-related injuries, motorcycle-related injuries, motor vehicle occupant-related injuries, and sports-related injuries continued to be collected within this category.

The overall unintentional injury rate in 2017 was 15.3 injuries per 100 VT years. This was 35 percent greater than the rate in 2016 (11.3 injuries per 100 VT years). While the difference was statistically significant ( $p < 0.05$ ), a change in the data review process may have led to more cases being captured in the ESS. The highest incidence rate of unintentional injuries occurred in the EMA region (17.3 cases per 100 VT years), followed by Africa (15.7 cases per 100 VT years) and IAP (12.6 cases per 100 VT years).

For the first time since 2002, the Africa region did not have the lowest rate of unintentional injuries among the three regions, surpassing the IAP region in 2017.

Among the 1,074 unintentional injuries reported in 2017, 29 percent were classified as falling injuries. Animal bites or scratches accounted for 26 percent of the injuries, sports-related injuries 22 percent, and bicycle injuries 8 percent. The remainder consisted of burns (7 percent), motor vehicle occupant injuries (4 percent), and motorcycle injuries, pedestrian injuries, needle stick injuries, and heat exhaustion (1 percent each).

Healthy Volunteer 2020 Indicator: Reduce the rate of sports-related injuries		
Baseline (2014)	2017	2020 Target
2.9 cases per 100 VT years	3.4 cases per 100 VT years	2.3 cases per 100 VT years

Reports of concussions were also captured in 2017. Concussions are defined as an alteration in mental status, with or without loss of consciousness, resulting from a trauma. There were 26 cases of concussions in 2017: 8 in the Africa region, 9 in EMA, and 9 in IAP.

The overall rate of road traffic injuries (pedestrian, bicycle, motorcycle, and motor vehicle occupant) among Volunteers was similar in 2017 (2.3 cases per 100 VT years) to the previous year (2.0 cases per 100 VT years).

Healthy Volunteer 2020 Indicator: Reduce the rate of road traffic injuries		
Baseline (2014)	2017	2020 Target
3.5 cases per 100 VT years	2.3 cases per 100 VT years	3.0 cases per 100 VT years

The rates of motorcycle injuries (0.2 cases per 100 VT years) and pedestrian injuries (0.2 cases per 100 VT years) remained low compared to other traffic-related injuries: bicycle injuries (1.2 cases per 100 VT years), and motor vehicle occupant injuries (0.6 cases per 100 VT years). The transition from paper to electronic medical record in 2015 reduced the rates of mis-coding which explains the drop in pedestrian injuries over the past few years. GIS maps of road traffic-related injury incidence rates can be found in Appendix F.

### ***Musculoskeletal conditions***

In 2017, there were 1,671 cases of musculoskeletal problems reported in Volunteers, for a rate of 23.8 cases per 100 VT years worldwide. There was an 18 percent increase in the rate of musculoskeletal conditions from 2016 (20.2 cases per 100 VT years) to 2017; the difference was statistically significant ( $p < 0.05$ ) the etiology of the increase remains unclear. The highest rate was reported in the EMA region (27.7 cases per 100 VT years), which was significantly higher than Africa (20.8 cases per 100 VT years) ( $p < 0.05$ ) but not significantly higher than IAP (25.0 cases per 100 VT years) ( $p > 0.05$ ).

Back pain was the most frequently reported musculoskeletal problem (28 percent), followed by new onset of joint pain (26 percent), sprains (23 percent), and tendinitis (8 percent). Cases of back pain included both acute and chronic back pain. The 476 cases of back pain reported through the ESS in 2017 occurred in 438 Volunteers. There were 96 reports of fractured bones (6 percent).

### ***Oncology***

A total of 16 cases of malignant neoplasms (cancer) were reported in Volunteers in 2017. Of these, 10 were skin cancer (melanoma, basal cell, or squamous cell), 1 was testicular cancer, 1 was prostate cancer, 1 was breast cancer, 1 was leukemia, 1 was non-Hodgkin's lymphoma, and 1 was brain cancer.

### ***Ophthalmologic conditions***

The ophthalmologic condition category was introduced in 2013 to track a spectrum of eye-related infectious conditions (e.g., abscess, keratitis, blepharitis, conjunctivitis), which may be associated with the use of contact lenses. Blurry or double vision eye conditions are not reported in this category. In 2016, the category was separated by condition to include: blepharitis, chalazion, conjunctivitis, corneal abrasion, hordeolum externum, and keratitis.

There were 401 cases of ocular conditions reported in Volunteers worldwide in 2017. There were 157 cases of ocular conditions reported in the Africa region; IAP reported 136 cases; and EMA reported 108 cases. The majority of these cases were conjunctivitis (290 cases, 72 percent). There were 17 reports of ocular conditions associated with the use of contact lenses.

The overall rate for ophthalmologic conditions reported in 2017 was 5.7 cases per 100 VT years. The rate for ocular conditions associated with contact lens use was 0.2 cases per 100 VT years.

### ***Respiratory, pulmonary, and ear, nose & throat conditions***

Respiratory infections were collected through the ESS prior to 2006. In 2005, upper respiratory illness was the second most commonly reported health-related condition in Volunteers worldwide. From 2006 to 2015, new cases or exacerbations of asthma were the only respiratory or pulmonary condition captured by the ESS. Several new codes were introduced in 2016, including bronchitis, streptococcal pharyngitis, laryngitis, oral candidiasis, otitis externa, otitis media, pneumonia, upper respiratory tract infection, and viral pharyngitis. In 2017, there were 43.1 cases per 100 VT years of respiratory conditions/ENT; this was an 18 percent increase from 2016 (36.5 cases per 100 VT years); the difference was statistically significant ( $p < 0.05$ ) but it is unclear if this represents a long term trend. Respiratory conditions/ENT continued to be the second most commonly reported condition in Volunteers.

### ***Asthma***

Asthma is defined as the presence or history of symptoms consistent with asthma, combined with the demonstration of variable expiratory airflow obstruction, - The overall rate of asthma exacerbations or newly diagnosed asthma

reported in 2017 was 0.8 cases per 100 VT years.

### ***Pneumonia***

Pneumonia is an acute infection of the lungs that can cause cough, fever, and chest pain. A number of different organisms can cause pneumonia, primarily bacteria and viruses. In 2017, there were 40 cases of pneumonia reported, with the highest rate in the EMA region (13 cases, 0.7 cases per 100 VT years), followed by the Africa region (19 cases, 0.6 cases per 100 VT years) and the IAP region (8 cases, 0.4 cases per 100 VT years).

### ***Upper respiratory tract infection***

Upper respiratory tract infections, also known as the common cold, were one of the most frequently reported conditions through the ESS in 2017, with 1,593 cases (22.7 cases per 100 VT years). The rate of upper respiratory tract infections in the EMA region (32.8 cases per 100 VT years) was 44 percent greater than the global rate the cause remains unclear.

Upper respiratory tract infections represented 53 percent of respiratory, pulmonary, and ENT cases reported in Volunteers worldwide in 2017.

## Sexually transmitted infections

### Sexually transmitted infections, non-HIV

Healthy Volunteer 2020 Indicator: Reduce the rate of confirmed bacterial STIs		
Baseline (2014)	2017	2020 Target
0.8 cases per 100 VT years	0.7 cases per 100 VT years	0.5 cases per 100 VT years

In 2017, 68 cases of sexually transmitted infections (STIs) (both bacterial and viral) were reported among Volunteers, for a rate of 1.0 cases per 100 VT years. This rate does not include HIV or gynecological infections reported elsewhere in the ESS.

Of these, 48 cases were confirmed bacterial STIs. This includes cases of chlamydia, gonorrhea, syphilis, and trichomonas. No cases of chancroid were reported in 2017. Prior to 2016, cases of confirmed and presumed bacterial STIs were reported separately; beginning in 2016, only lab-confirmed cases were counted.

There were also 20 reported cases of genital warts, a viral STI caused by human papillomavirus (HPV). Genital warts is a chronic condition and several of the cases were known prior to service. HPV is not routinely tested for among Volunteers.

Regional maps of country rates of STIs can be viewed in Appendix F.

## Severe outcomes

### Medevacs

Medical evacuations (medevacs) include all medical evacuations to another country when a Volunteer's illness or injury requires evaluation or treatment that is not available in the Volunteer's country of service. Volunteers may be medevaced more than once or the same Volunteer may be medevaced to a regional center and then to the U.S. In these instances, each of the medevacs has been counted separately.

The overall medevac rate in 2017 was 8.1 evacuations per 100 VT years (571 medevacs). Medevacs to regional centers had a rate of 2.4 evacuations per 100 VT years, while medevacs to the U.S. had a rate of 5.8 evacuations per 100 VT years.

Since 2010, the rate of medevacs to the U.S. has surpassed the rate of medevacs to regional centers.

In 2017, there were 406 medevacs (71 percent) to the U.S. (home of record or Washington, D.C.) compared to 165 medevacs (29 percent) to regional sites. Regional medevac sites included Thailand, South Africa, Morocco, Panama, New Zealand, Philippines, and American Samoa. Ten medevacs to the U.S. (Washington D.C. or to the Volunteer's Home of Record) were first medevaced to a regional center. Thirty-one Volunteers were medevaced more than one time in 2017. Twenty-four Volunteers were medevaced more than once for the same health

issue; this included Volunteers who were medevaced first to a regional center and then to the U.S.

Worldwide, 54 percent of medevacs were for medical reasons, 30 percent for mental health reasons, 5 percent for both medical and mental health reasons, and 11 percent for dental reasons. For medevacs to the U.S., 50 percent were for medical reasons, 43 percent for mental health reasons, 6 percent for both, and <1 percent for dental. Most regional medevacs were for medical reasons (64 percent) or dental reasons (35 percent); two medevacs were for both medical and mental health reasons. Mental health medevacs often go to their Home of Record to receive longer-term care.

Of medevacs to the U.S., 12 percent (49 medevacs) were emergent; 25 percent (102 medevacs) were urgent; and 63 percent (255 medevacs) were non-urgent. Of medevacs to

regional sites, 7 percent (11 medevacs) were emergent; 17 percent (28 medevacs) were urgent; and 76 percent (126 medevacs) were non-urgent.

Emergent medevacs are defined as medevacs requiring evacuation to a tertiary care hospital within 24 hours to save life, limb, or eyesight, and include examples such as appendicitis, severe trauma, or ectopic pregnancy. Urgent medevacs require evacuation to a tertiary care hospital within 72 hours or their medical condition will deteriorate to an emergent case. Examples include bacterial keratitis or fracture requiring surgery. A non-urgent medevac is to receive a procedure or test not available locally, such as dental care, colposcopy, or evaluation for a possible autoimmune condition.

In 2017, there were 5 air ambulance medevacs. One medevac originated from the Inter-America and the Pacific region; and 2 each from the Africa and Europe, Mediterranean and Asia regions. Two medevacs were to receive care for traumatic injuries, one medevac for an infectious disease, one medevac for an endocrine disorder, and one for a neurological condition.

Medevacs for a medical reason lasted an average of 28.6 days, while medevacs for a mental health reason lasted an average of 40.5 days. Medevacs for both medical and mental health reasons lasted an average of 36.8 days, and medevacs for dental reasons lasted an average of 12.5 days.

At the end of the medevac, 53 percent of Volunteers returned to post, 37 percent were medically separated, 4 percent closed service, 3 percent early terminated/interrupted service, 2 percent were medevaced to HOR/D.C., and <1 percent were on administrative hold. Volunteers who were medevaced to the U.S. most often medically separated (52 percent), while nine in ten Volunteers who were medevaced to one of the regional medical hubs (Morocco, South Africa, or Thailand) returned to post (92 percent).

Of medevacs for medical reasons, 58 percent returned to post, while 32 percent of mental health medevacs returned to post.

Of the 10 medevacs to HOR that were first medevaced to a regional center, 8 medically separated and 2 returned to post.

### *In-country hospitalizations*

In 2017, the rate of in-country hospitalizations for Volunteers was 4.5 hospitalizations per 100 VT years (316 hospitalizations). This count excludes hospitalizations that occurred on medevac, while the Volunteer was on vacation, and readmissions to be consistent with previous year's data.

The IAP region reported the highest rate of hospitalizations with a rate of 4.8 per 100 VT years (88 hospitalizations). The EMA region had a rate of 4.7 cases per 100 VT years (92 hospitalizations). The Africa region had an in-country hospitalization rate of 4.2 cases per 100 VT years (136 hospitalizations).

The average (mean) length of in-country hospitalizations worldwide was 3.0 days. This varied little by region, with 2.7 days in the Africa region, 3.3 days in the EMA region, and 3.0 days in the IAP region.

Reasons for in-country hospitalizations were captured from the primary discharge diagnosis reported on the in-country hospitalization form and converted to ICD-10. Of the 316 in-country hospitalizations reported worldwide, the leading reason for hospitalization was infectious diseases (including gastroenteritis) (37 percent, 118 hospitalizations), followed by injuries (18 percent, 57 hospitalizations), gastroenterology (excluding infectious gastroenteritis) (10 percent, 32 hospitalizations), and gynecology and urology (8 percent, 25 hospitalizations).

## In-service deaths

Three Volunteers/Trainees died during service in 2017.

## Pre-service

### Pre-service accommodations

Under the Peace Corps Act, the Peace Corps is responsible for ensuring that Peace Corps Volunteers receive all necessary or appropriate health care during their service. In order to do so, the Office of Medical Services assesses all Peace Corps Invitees individually to evaluate if they are qualified for medical service. With reasonable accommodation, individuals must have the physical and mental capacity to meet the essential eligibility requirements of a Peace Corps Volunteer, and Peace Corps must be

capable of providing the Applicant with health care that is necessary or appropriate. The Office of Health Services determine whether an Invitee can be medically supported for Peace Corps service and identifies country-specific resources that will allow Invitees with conditions requiring accommodation to serve safely and effectively.

The overall rate of medical accommodations was similar between 2016 and 2017, with 35.0 accommodations per 100 VT years (2,389 accommodations) in 2016 and 34.0 accommodations per 100 VT years (2,387 cases) in 2017.

Of the 2,387 accommodations in 2017, the most common accommodations were in-country mental health support (35 percent, 825 accommodations); specialist access accommodations such as cardiology and urology (20 percent, 486 accommodations), infrastructure support accommodations such as being closer to emergency services for patients with mild asthma (18 percent, 428 accommodations), and allergy accommodations such as ensuring food is safe for peanut allergies and shellfish allergies (17 percent, 407 accommodations). Volunteers may be accommodated for more than one condition. A total of 1,683 Volunteers were accommodated for at least one condition in 2017. The list of accommodations within each category can be found in the table on page 36.

The IAP region had the highest rate of all medical accommodations (39.2 cases per 100 VT years, 713 accommodations), followed by the Africa region (32.3 cases per 100 VT years, 1,046 accommodations) and EMA region (32.2 cases per 100 VT years, 628 accommodations).

## Post-service claims

After their close of service, Returned Peace Corps Volunteers (RPCVs) have three years from the date of injury or recognition that an illness is service-related to file claims under the Federal Employees' Compensation Act (FECA) for conditions that were caused, aggravated, accelerated, or precipitated by their service. Claims are filed and adjudicated and paid by the U.S. Department of Labor (DOL), Office of Workers' Compensation Programs (OWCP). Peace Corps assists returned Volunteers with the claims process. The following data were extracted on January 19, 2018.

The amount that Peace Corps will pay as a result of claims accepted by the Department of Labor made by Volunteers in Fiscal Year 2017 will be \$13,588,072. This amount is for all Returned Peace Corps Volunteers receiving payment through DOL/OWCP as a result of a Peace Corps service-related condition, and is inclusive of all years of service, years the claim was made, and duration of conditions, as some conditions require ongoing support.

## Appendix A: 2017 Epi Codes in PCMEDICS

### Epi Category-Code List

#### Behavioral health

Adjustment difficulty  
Alcohol intoxication  
Alcohol withdrawal delirium  
Binge drinking  
Cigarette smoker  
Concerns Related to Anxiety  
Concerns Related to Depressed Mood  
Concerns Related to Grief  
Concerns Related to Identity  
Concerns Related to Panic-like Symptoms  
Concerns Related to Potential Mania  
Concerns Related to Potential Psychosis  
Concerns Related to Stress after a Trauma  
Disordered Eating Behaviors  
Drug Use Concerns  
Drug use, illicit  
Experience of a Trauma (Sub-Threshold or Asymptomatic)  
Health Anxiety  
Phobia  
Psychiatric Medication Management Concerns  
Recurrence of mental health accommodated condition  
Relationship Concerns  
Risky alcohol use  
Work Related Concerns

#### Cardiology

Elevated BP  
Hypertension, new onset

#### Dental

Dental abscess  
Dental caries  
Fracture of tooth  
Temporomandibular joint disorder

#### Dermatology

Abscess of skin  
Actinic keratosis  
Alopecia (hair loss)  
Atopic Dermatitis  
Bacterial skin infection  
Cellulitis  
Contact dermatitis  
Impetigo  
Insect bite or sting  
Laceration  
Rash, nonspecific  
Tinea

#### Endocrinology

Clinically significant weight gain (+5%)  
Clinically significant weight loss (-5%)  
Hyperthyroidism, new onset  
Hypothyroidism, new onset  
Thyroid nodule  
Type II diabetes mellitus, new onset

#### ENT

Laryngitis  
Oral candidiasis  
Otitis externa  
Otitis media  
Streptococcal pharyngitis  
Upper respiratory tract infection  
Viral pharyngitis

#### Environmental

Air quality concern  
Water quality concern

#### Gastrointestinal

Amebiasis  
Appendicitis  
Diarrhea, bacterial confirmed  
Diarrhea, bacterial presumed  
Diarrhea, viral presumed  
Gastroenteritis, viral  
Gastroesophageal reflux disease  
Giardiasis  
Helminths  
Salmonellosis  
Shigellosis

#### Gynecology

Abnormal cervical Papanicolaou smear  
Amenorrhea  
Bacterial vaginosis  
Breast lump / mass (includes fibroadenoma)  
Candidiasis of vagina / vulvovaginal  
Dysmenorrhea  
Endometriosis  
Intrauterine contraceptive device, insertion  
Intrauterine contraceptive device, removal  
Menorrhagia  
Oligomenorrhea  
Pelvic inflammatory disease  
Pregnancy  
Vaginitis

#### Hematology

Anemia

#### Immunology

Adverse reaction to drug  
Allergic reaction

#### Infectious diseases

Chikungunya fever  
Dengue  
Filariasis  
Hepatitis (A, B, C, Other)  
Infectious mononucleosis  
Influenza  
Influenza-like illness  
Leishmaniasis  
Malaria, falciparum  
Malaria, falciparum, complicated  
Malaria, non-falciparum  
Malaria, presumptive  
Meningitis, bacterial or viral  
Rabies post-exposure prophylaxis  
Schistosomiasis  
Strongyloidiasis  
Tick-borne disease  
Tuberculosis, active  
Tuberculosis, latent infection  
Typhoid fever  
Zika

#### Injuries

Animal bite or scratch  
Bicycle injury  
Burn  
Concussion

#### Injuries (continued)

Falling injury  
Heat exhaustion  
Motor vehicle occupant injury  
Motorcycle injury  
Needle stick injury  
Pedestrian injury  
Sports-related injury  
Traumatic injury due to assault

#### Musculoskeletal

Back pain  
Bursitis  
Dislocation  
Fracture of bone  
Joint pain, new onset  
Ligament or muscle tear  
Plantar fasciitis  
Sprain  
Tendinitis

#### Neurology

Migraine headache  
Seizure

#### Oncology

Malignant neoplasm

#### Ophthalmology

Blepharitis  
Chalazion  
Conjunctivitis  
Corneal abrasion  
Hordeolum externum  
Keratitis  
Ocular condition associated with contact lens use

#### Procedures

Colonoscopy  
Colposcopy  
Major surgical procedure with general anesthesia

#### Pulmonary

Asthma, new onset or exacerbation  
Bronchitis  
Pneumonia

#### Sexually transmitted infections

Chancroid  
Chlamydial infection  
Genital warts  
Gonorrhea  
HIV infection, new  
HIV post-exposure prophylaxis  
Syphilis  
Trichomonas

#### Urology/nephrology

Epididymitis  
Prostatitis  
Pyelonephritis  
Testicular mass  
Urinary tract infection  
Urolithiasis (stones in the kidney, bladder, and/or urethra)  
Varicocele

## Appendix B: Peace Corps Volunteers by Countries and Regions, 2017

**Table 6:** Number of mental health cases addressed by headquarters Counseling and Outreach staff, 2017

<b>COU Diagnosis 2017 (Based on DSM-5)</b>	<b>Number of Cases</b>	<b>Number of Cases that Resulted in a Medevac</b>
Acute Stress Disorder	32	2
Adjustment Disorder*	172	38
Alcohol Abuse Disorder	15	13
Anxiety Disorder	36	10
Bipolar Disorder	3	2
Depressive Disorder	81	30
Eating Disorder	4	3
Other Diagnosis	76	48
Posttraumatic Stress Disorder	44	22
Psychotic Disorder	0	0
No Diagnosis**	213	10
<b>Total</b>	<b>676</b>	<b>178</b>

Each case represents one Volunteer, as opposed to each individual session. Each case can have multiple sessions (not listed in Table 6). Cases may be medevaced for mental health and medical reasons (more than one reason). Data presented on COU cases was provided by COU staff for calendar year 2017 (January-December).

\* Adjustment Disorder includes a psychological response to an identifiable stressor or group of stressors, such as work or interpersonal relationships, that cause significant emotional or behavioral symptoms that do not meet criteria for another specific disorder but that rise to the level of a diagnosable mental health condition.

\*\* "No Diagnosis" includes adjustment-related concerns and subthreshold conditions that do not rise to the level of a diagnosable mental health condition.

**Pre-service accommodations definitions:**

- Psychotropic Accommodations: Post has an English speaking Board Certified Psychiatrist (or host country equivalent) who can monitor/maintain, prescribe, and titrate psychotropic medications
- Mental Health Accommodations: The Peace Corps Medical Team OR in-country counselor can provide brief, supportive or re-stabilizing counseling where necessary and the Peace Corps Medical Team is able to monitor the stability of pre-existing mental health conditions and to clinically evaluate efficacy and adverse effects of non-complicated psychotropic medication regimens
- Site Specific Support Accommodations: Requires a site close to Emergency care or with 24-hour electricity for medication storage. Diseases requiring a site accommodation include Asthma, Diabetes, and Seizures.
- Allergy Accommodations: Post can ensure avoidance of certain allergenic foods examples include Egg Allergy, Gluten Allergy, Lactose Intolerance, Peanut Allergy, Environmental Allergy, Shellfish Allergy
- Specialist Access Accommodations: Cardiology, Ear, Nose & Throat, Endocrinology, Dermatology, Gastroenterology, Gynecology, Mammography, Ophthalmology, Orthopedics, Urology
- Medication Accommodations: Adderall, Ritalin, Vyvanse
- Infrastructure Support Accommodations: Requires medical infrastructure such as capacity for intubation and artificial ventilation. Examples include Mild Asthma/Reactive Airway Disease
- Special Condition Accommodations: Non-Malarial (post ensures access to a site free of malaria in persons with medical contraindication to anti-malarial medications), HIV
- Other: Gynecology IUD, G6PD Deficiency

## Appendix D: Office of Health Services' oversight of countries of Peace Corps service

\*HQ/ FS staff respond directly to consults from these countries

\*\* Part of IAP region but covered by EMA RMOs.

Red text: Peace Corps country suspended operations (Burkina Faso)

## Appendix E: Country-Specific Data

## Appendix F: GIS Maps by Region, Incidence Rates of Conditions by Country

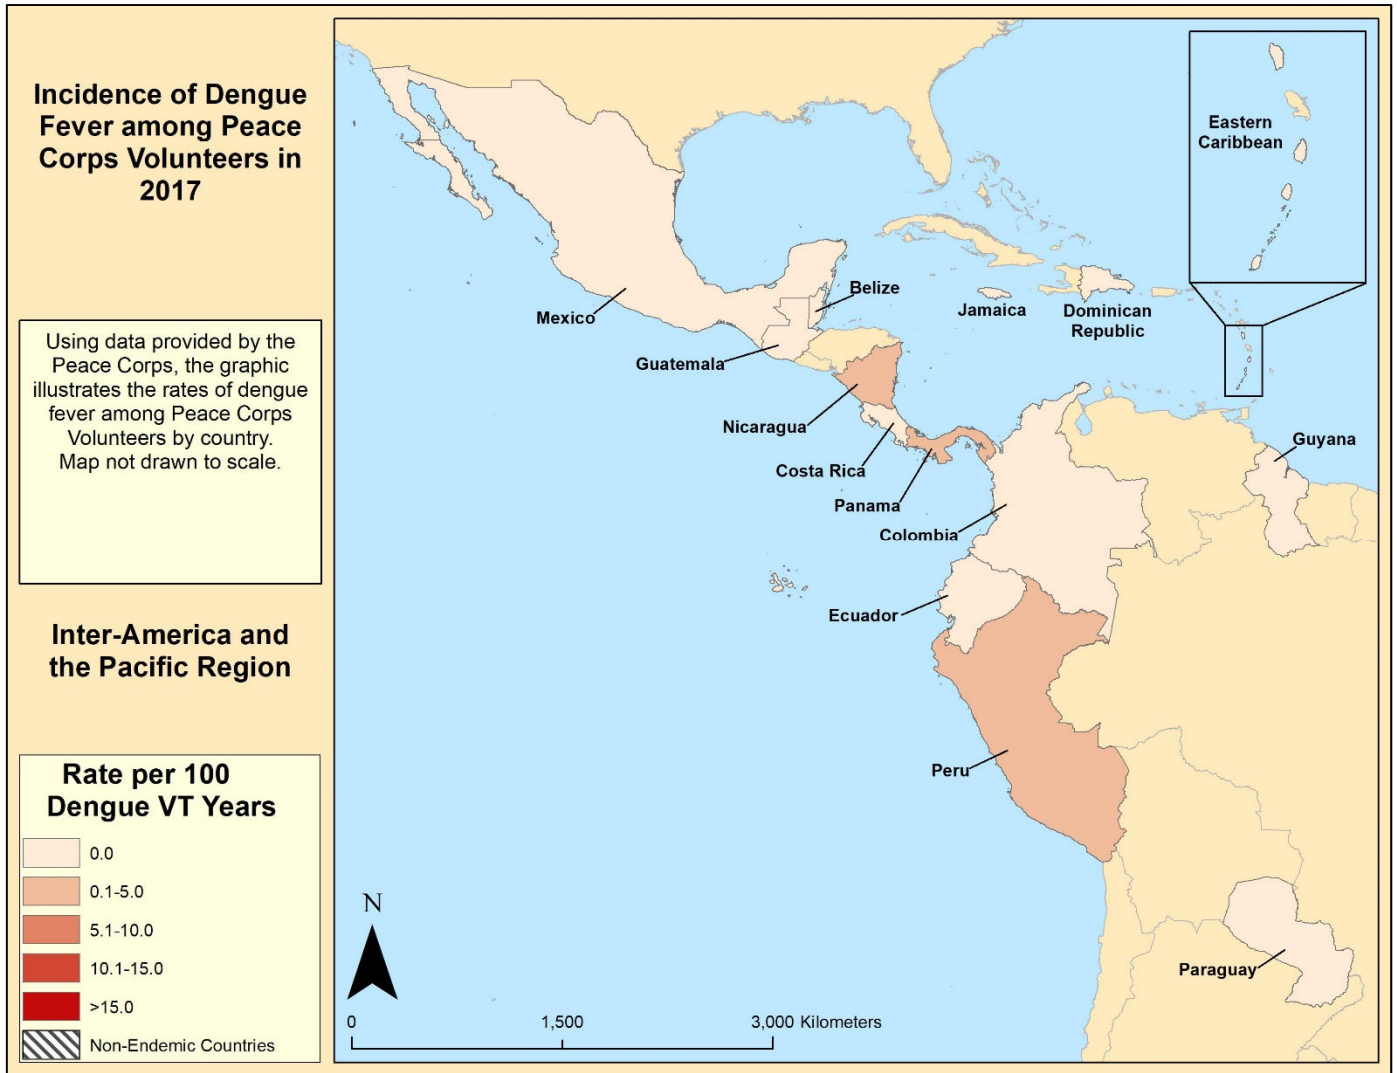

# Incidence of Dengue Fever among Peace Corps Volunteers in 2017

Using data provided by the Peace Corps, the graphic illustrates the rates of dengue fever among Peace Corps Volunteers by country. Map not drawn to scale.

## Europe/ Mediterranean/ Asia Region

### Rate per 100 Dengue VT Years

# **Incidence of Dengue Fever among Peace Corps Volunteers in 2017**

Using data provided by the Peace Corps, the graphic illustrates the rates of dengue fever among Peace Corps Volunteers by country. Map not drawn to scale.

## **Inter-America and the Pacific Region**

### **Rate per 100 Dengue VT Years**

# **Rate of HIV Infection among Peace Corps Volunteers between 2008 - 2017**

Using data provided by the Peace Corps, the graphic illustrates the incidence of HIV infections among Peace Corps Volunteers by country during this period of time. Map not drawn to scale.

## **Africa Region**

### **Rate per 100 VT Years**

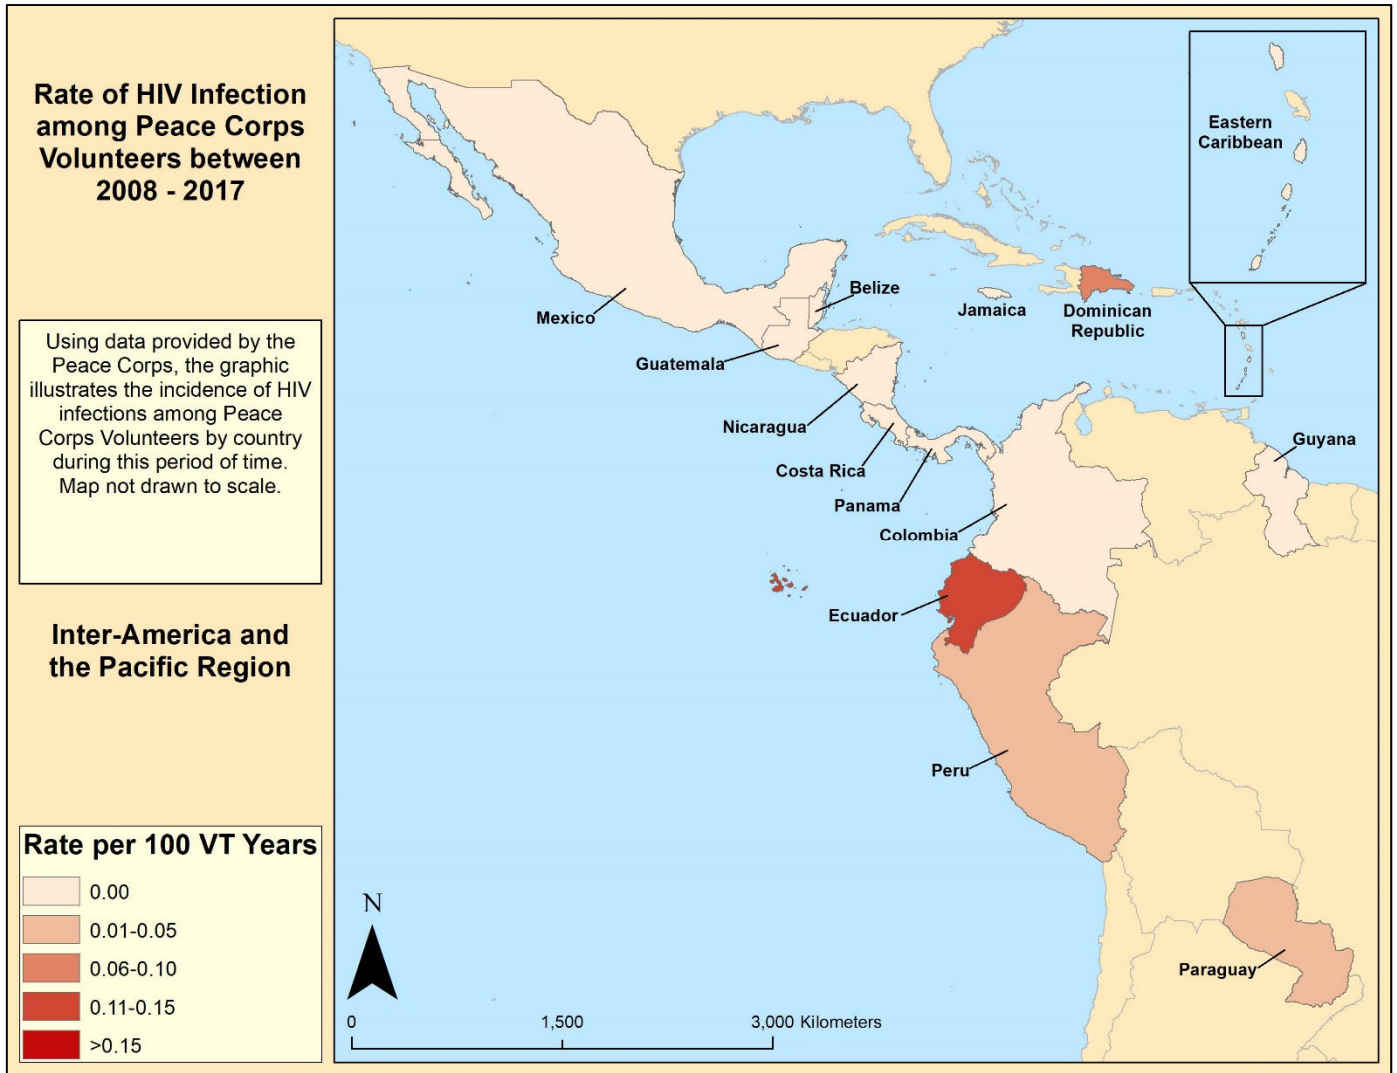

# **Rate of HIV Infection among Peace Corps Volunteers between 2008 - 2017**

Using data provided by the Peace Corps, the graphic illustrates the incidence of HIV infections among Peace Corps Volunteers by country during this period of time. Map not drawn to scale.

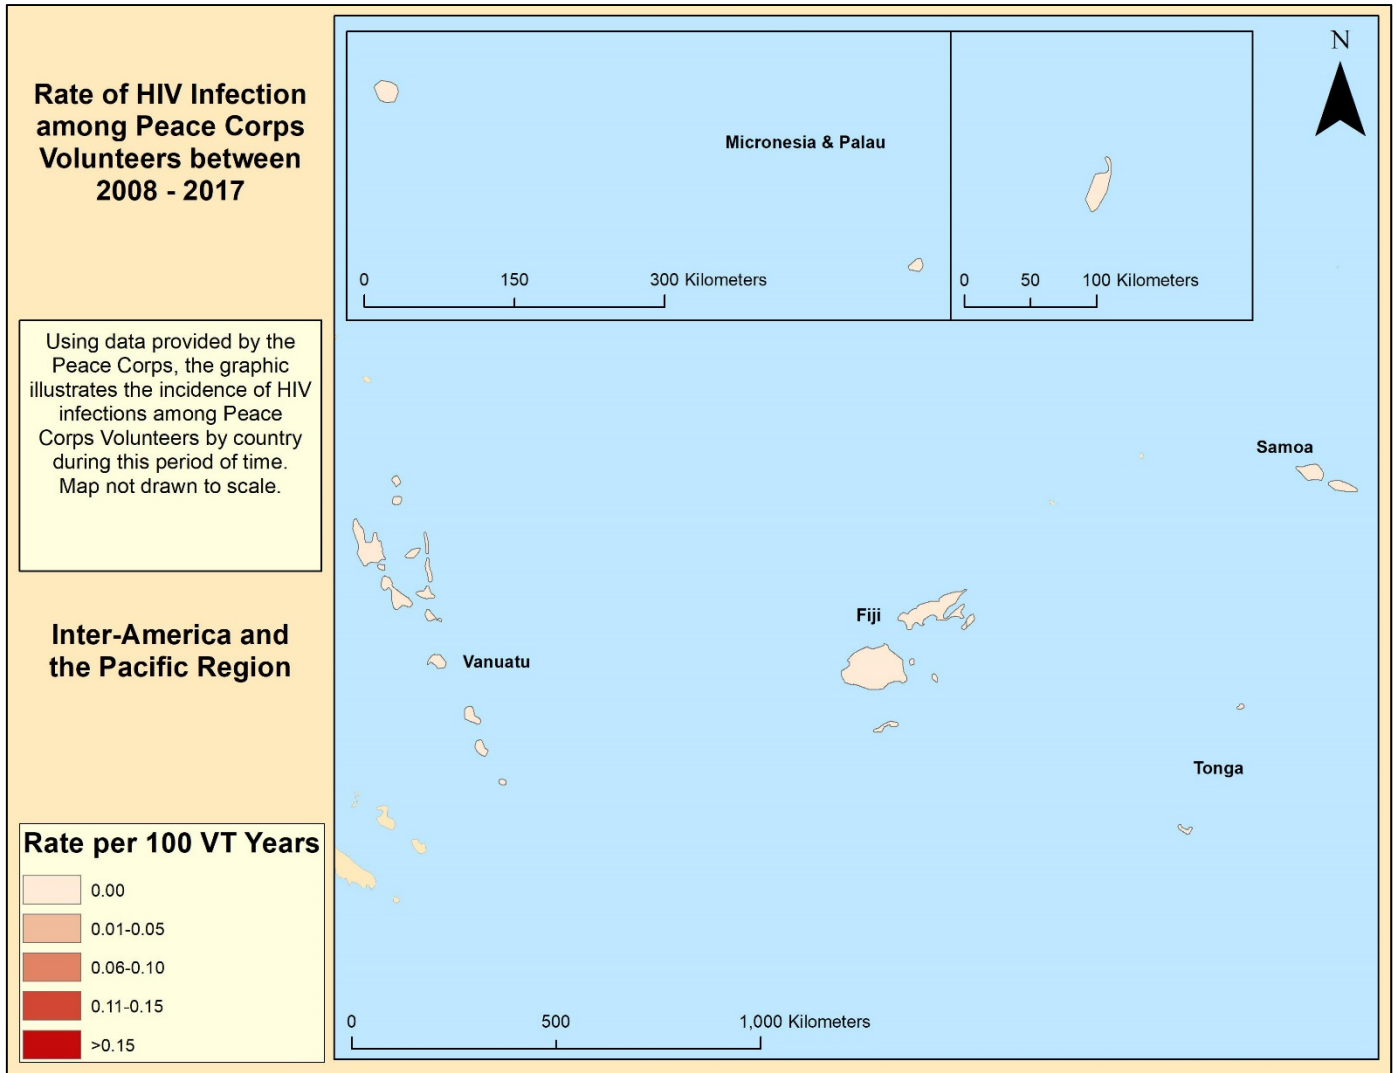

**Europe/  
Mediterranean/  
Asia Region**

## **Rate per 100 VT Years**

# **Rate of HIV Post-Exposure Prophylaxis (PEP) Prescriptions among Peace Corps Volunteers in 2017**

Using data provided by the Peace Corps, the graphic illustrates the rates of HIV PEP prescriptions among Peace Corps Volunteers by country. Map not drawn to scale.

## **Africa Region**

### **Rate per 100 VT Years**

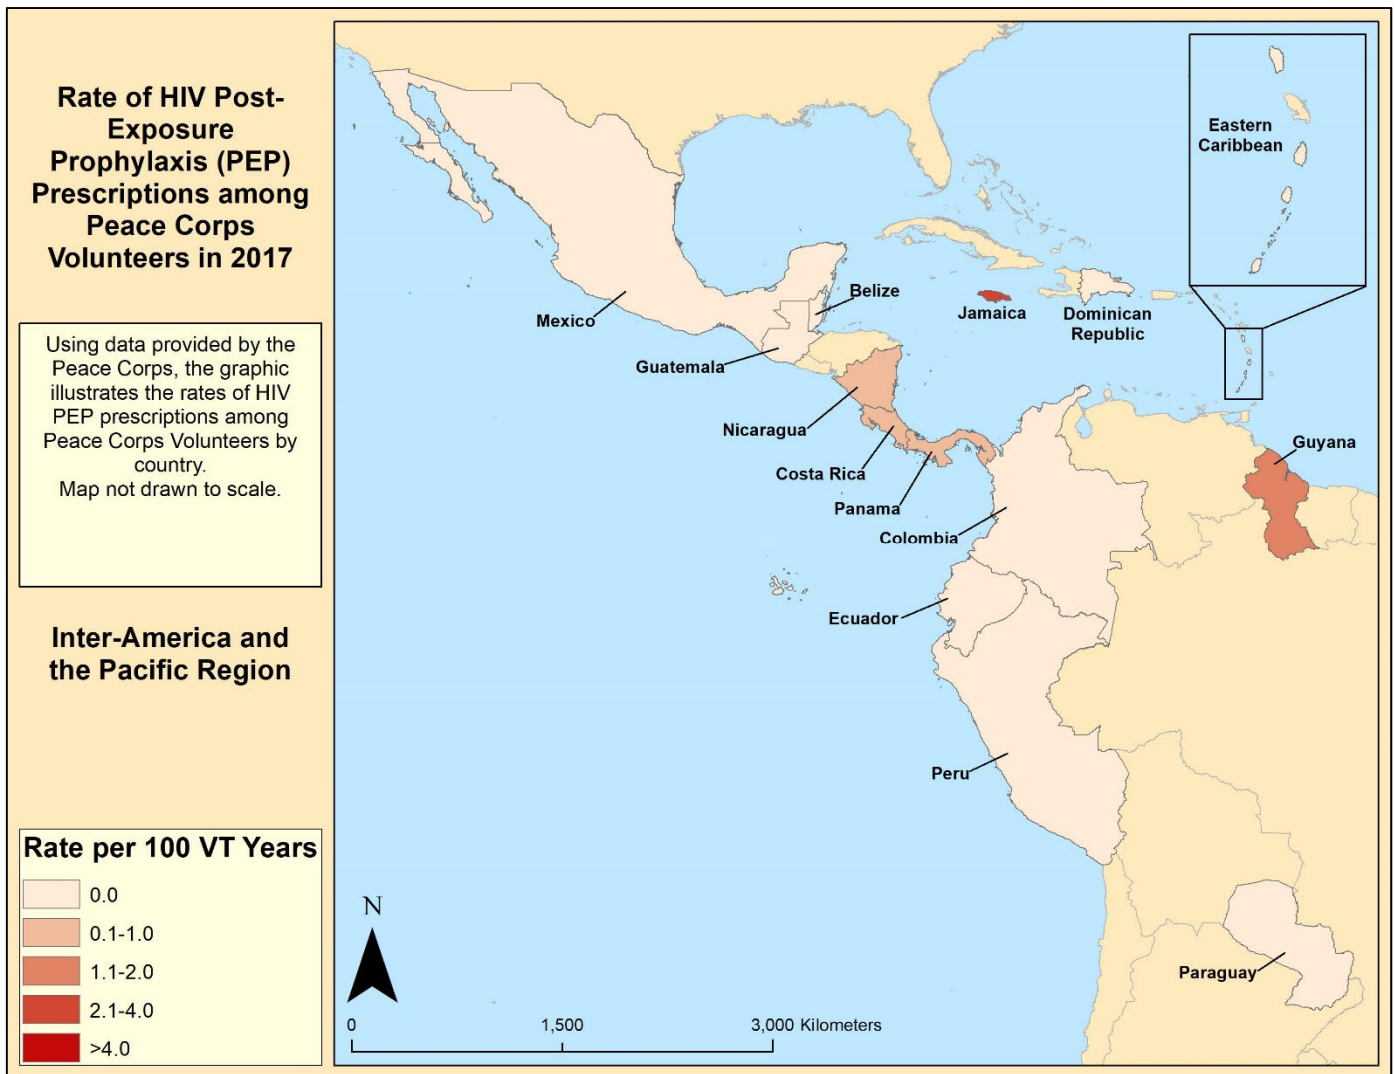

# **Rate of HIV Post-Exposure Prophylaxis (PEP) Prescriptions among Peace Corps Volunteers in 2017**

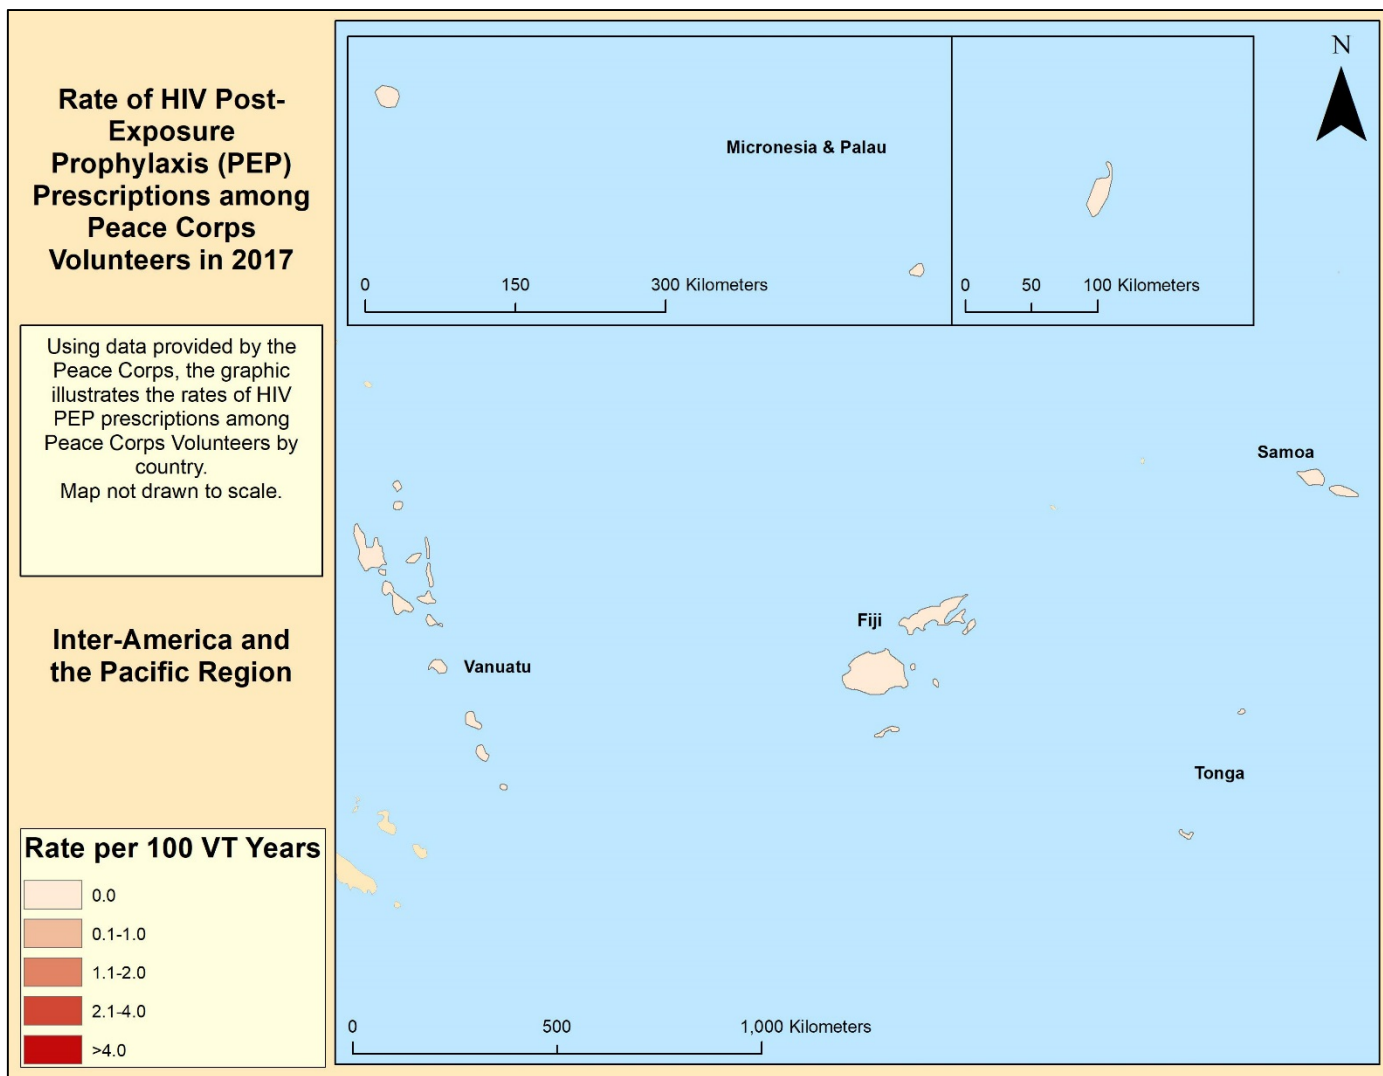

Using data provided by the Peace Corps, the graphic illustrates the rates of HIV PEP prescriptions among Peace Corps Volunteers by country. Map not drawn to scale.

**Europe/  
Mediterranean/  
Asia Region**

## **Rate per 100 VT Years**

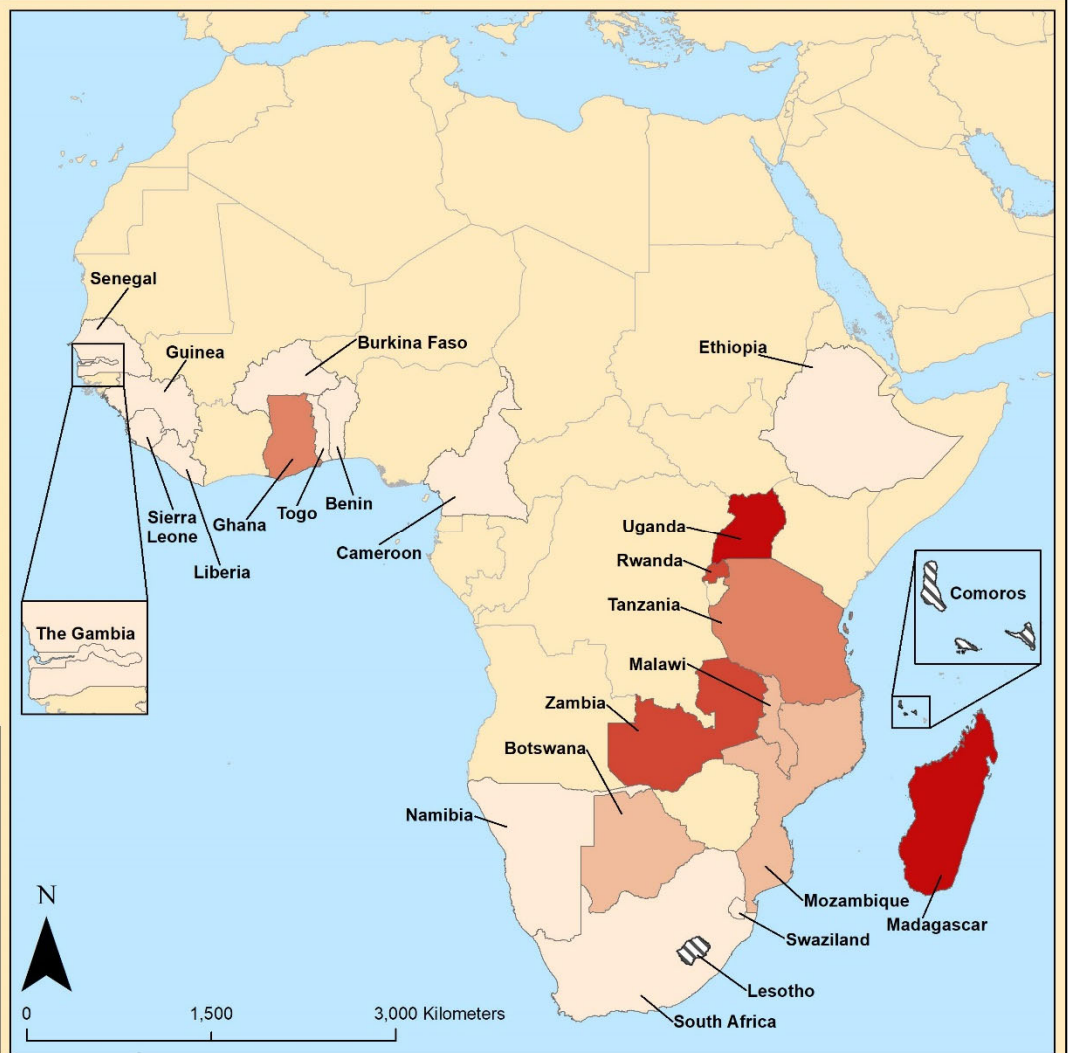

## Rate of Schistosomiasis Antibodies among Peace Corps Volunteers in 2017

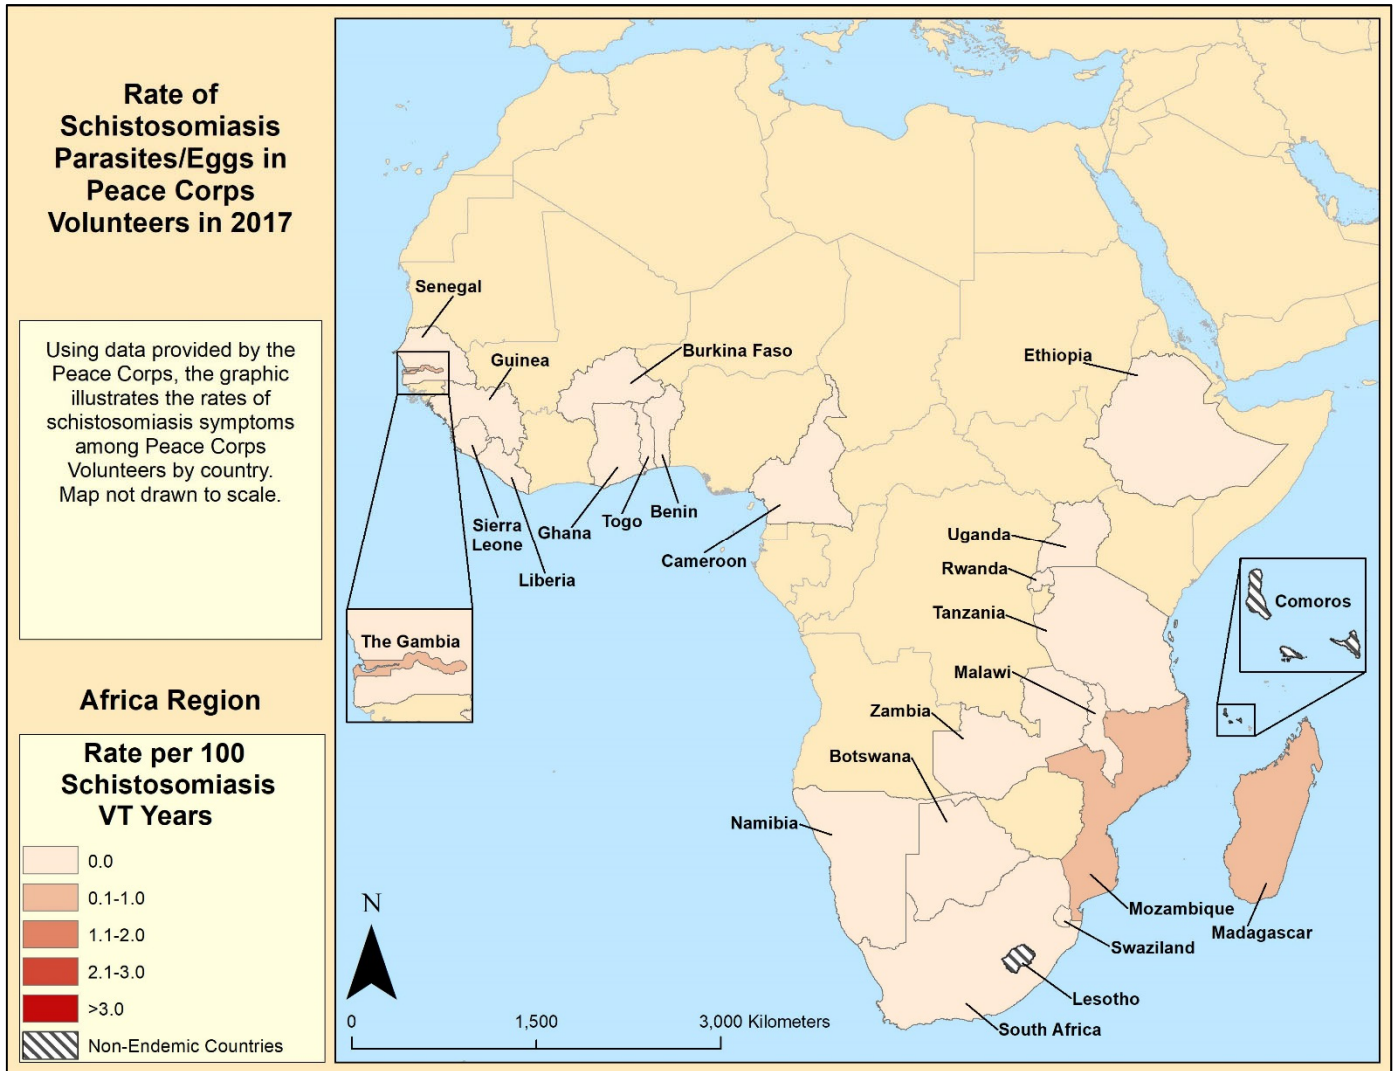

Using data provided by the Peace Corps, the graphic illustrates the prevalence of schistosomiasis antibodies among Peace Corps Volunteers by country. Map not drawn to scale.

### Africa Region

#### Rate per 100 Schistosomiasis VT Years

\* There were no schistosoma antibodies or parasites/eggs detected in PCVs in the EMA or IAP regions in 2017.

# Rate of Sexually Transmitted Infections among Peace Corps Volunteers in 2017

Using data provided by the Peace Corps, the graphic illustrates the incidence of STIs contracted by Peace Corps Volunteers by country. The graphic does not include hepatitis, HIV, or other gynecological conditions. Map not drawn to scale.

## Africa Region

### Rate per 100 VT Years

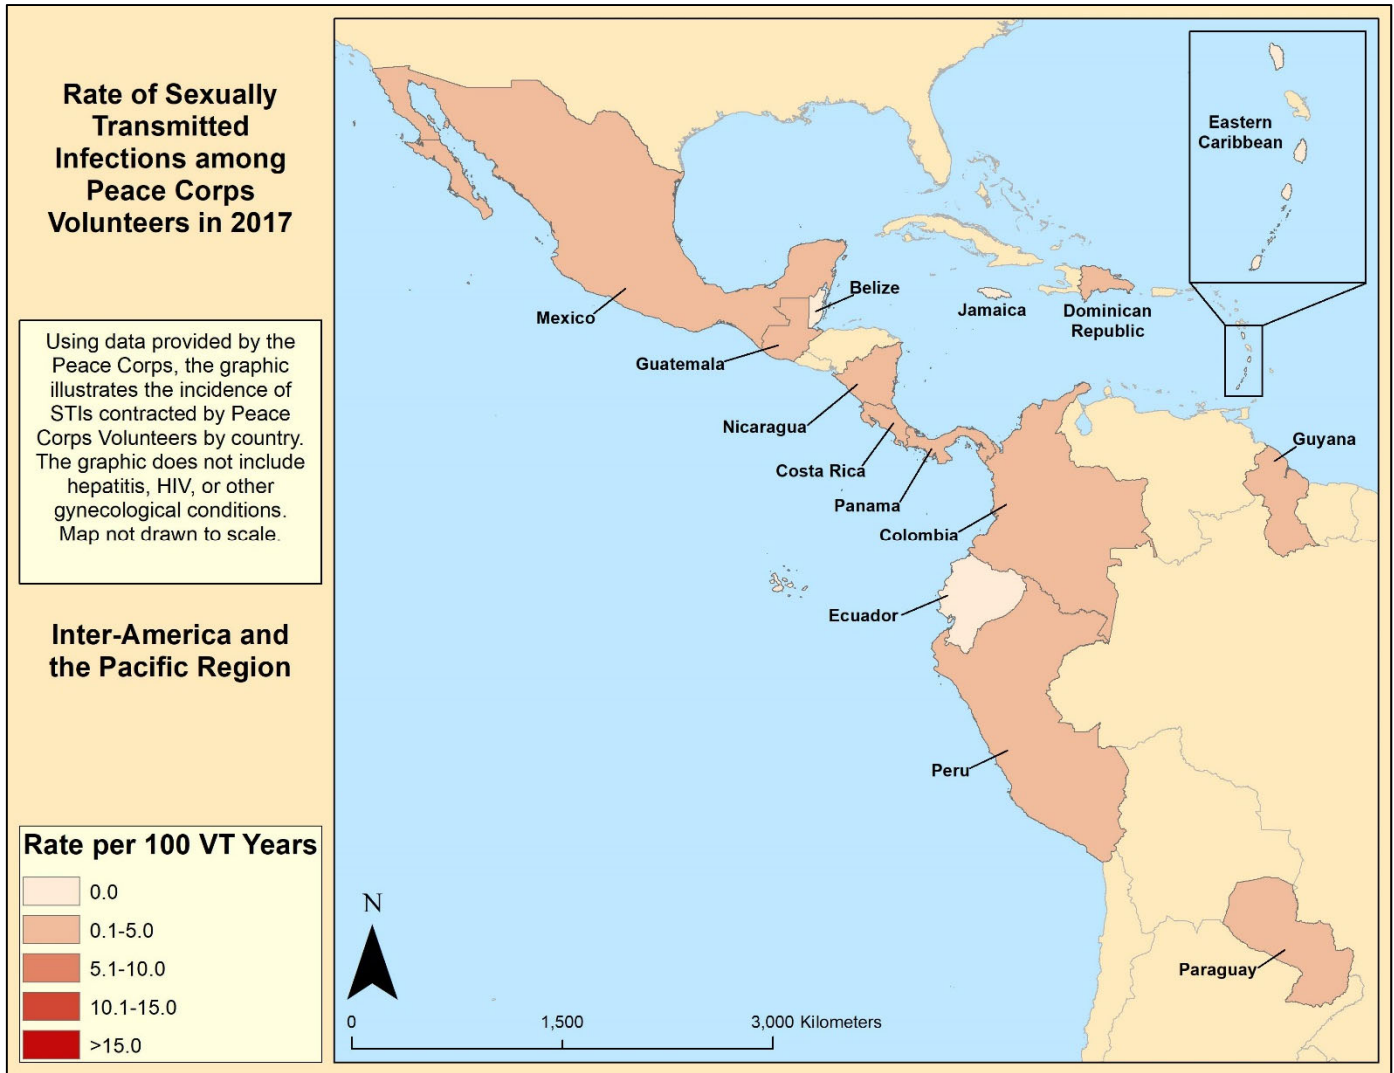

# Rate of Sexually Transmitted Infections among Peace Corps Volunteers in 2017

Using data provided by the Peace Corps, the graphic illustrates the incidence of STIs contracted by Peace Corps Volunteers by country. The graphic does not include hepatitis, HIV, or other gynecological conditions. Map not drawn to scale.

## Europe/ Mediterranean/ Asia Region

### Rate per 100 VT Years

# **Rate of Sexually Transmitted Infections among Peace Corps Volunteers in 2017**

Using data provided by the Peace Corps, the graphic illustrates the incidence of STIs contracted by Peace Corps Volunteers by country. The graphic does not include hepatitis, HIV, or other gynecological conditions. Map not drawn to scale.

## **Inter-America and the Pacific Region**

### **Rate per 100 VT Years**

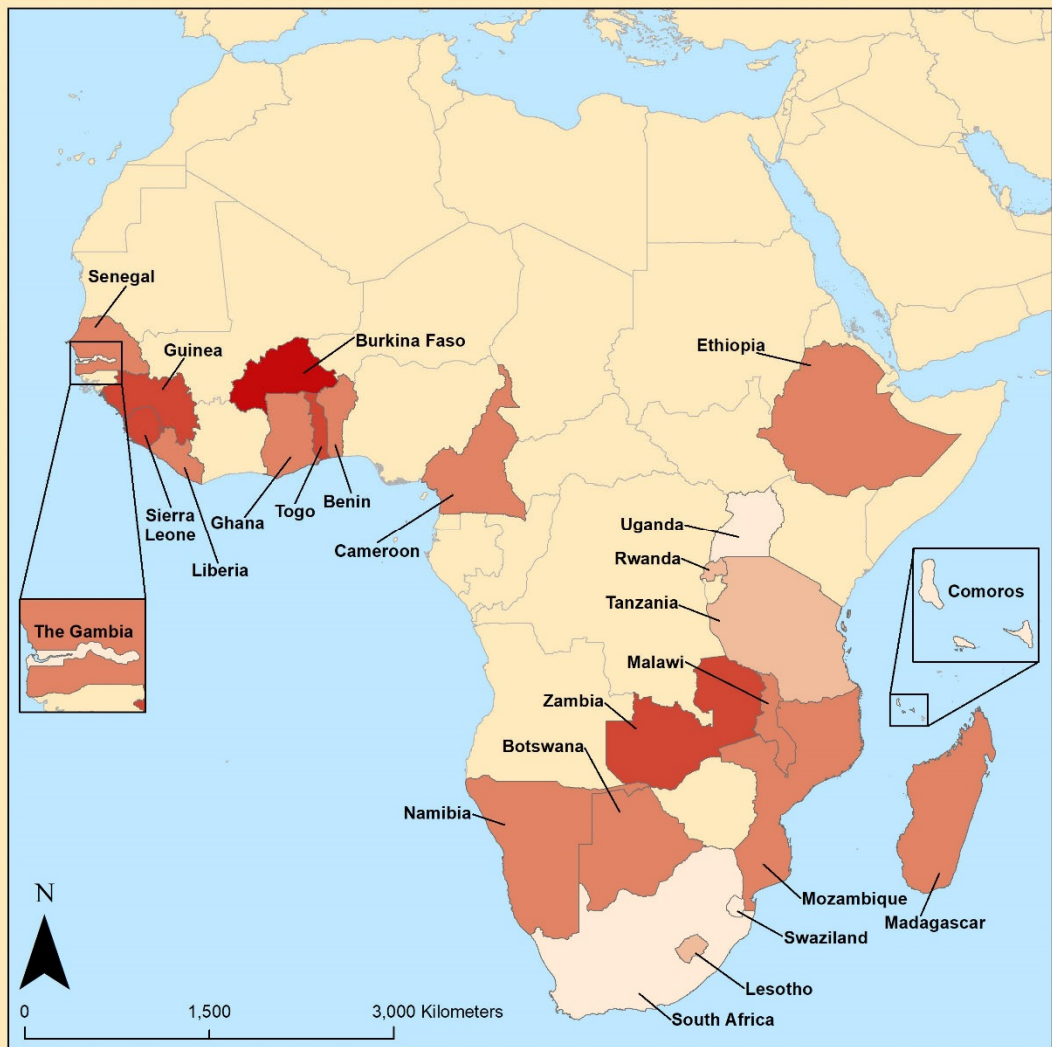

# Rate of Road Traffic Injuries among Peace Corps Volunteers in 2017

Using data provided by the Peace Corps, the graphic illustrates the incidence of road traffic injuries among Peace Corps Volunteers by country. Road traffic injuries include unintentional pedestrian, bicycle, motorcycle, and motor vehicle injuries. Map not drawn to scale.

## Africa Region

### Rate per 100 VT Years

# Rate of Road Traffic Injuries among Peace Corps Volunteers in 2017

Using data provided by the Peace Corps, the graphic illustrates the incidence of road traffic injuries among Peace Corps Volunteers by country. Road traffic injuries include unintentional pedestrian, bicycle, motorcycle, and motor vehicle injuries. Map not drawn to scale.

## Europe/Mediterranean/Asia Region

### Rate per 100 VT Years

## Rate of Road Traffic Injuries among Peace Corps Volunteers in 2017

Using data provided by the Peace Corps, the graphic illustrates the incidence of road traffic injuries among Peace Corps Volunteers by country. Road traffic injuries include unintentional pedestrian, bicycle, motorcycle, and motor vehicle injuries.  
Map not drawn to scale.

### Inter-America and the Pacific Region

#### Rate per 100 VT Years

## Rate of Road Traffic Injuries among Peace Corps Volunteers in 2017

Using data provided by the Peace Corps, the graphic illustrates the incidence of road traffic injuries among Peace Corps Volunteers by country. Road traffic injuries include unintentional pedestrian, bicycle, motorcycle, and motor vehicle injuries. Map not drawn to scale.

### Inter-America and the Pacific Region

#### Rate per 100 VT Years

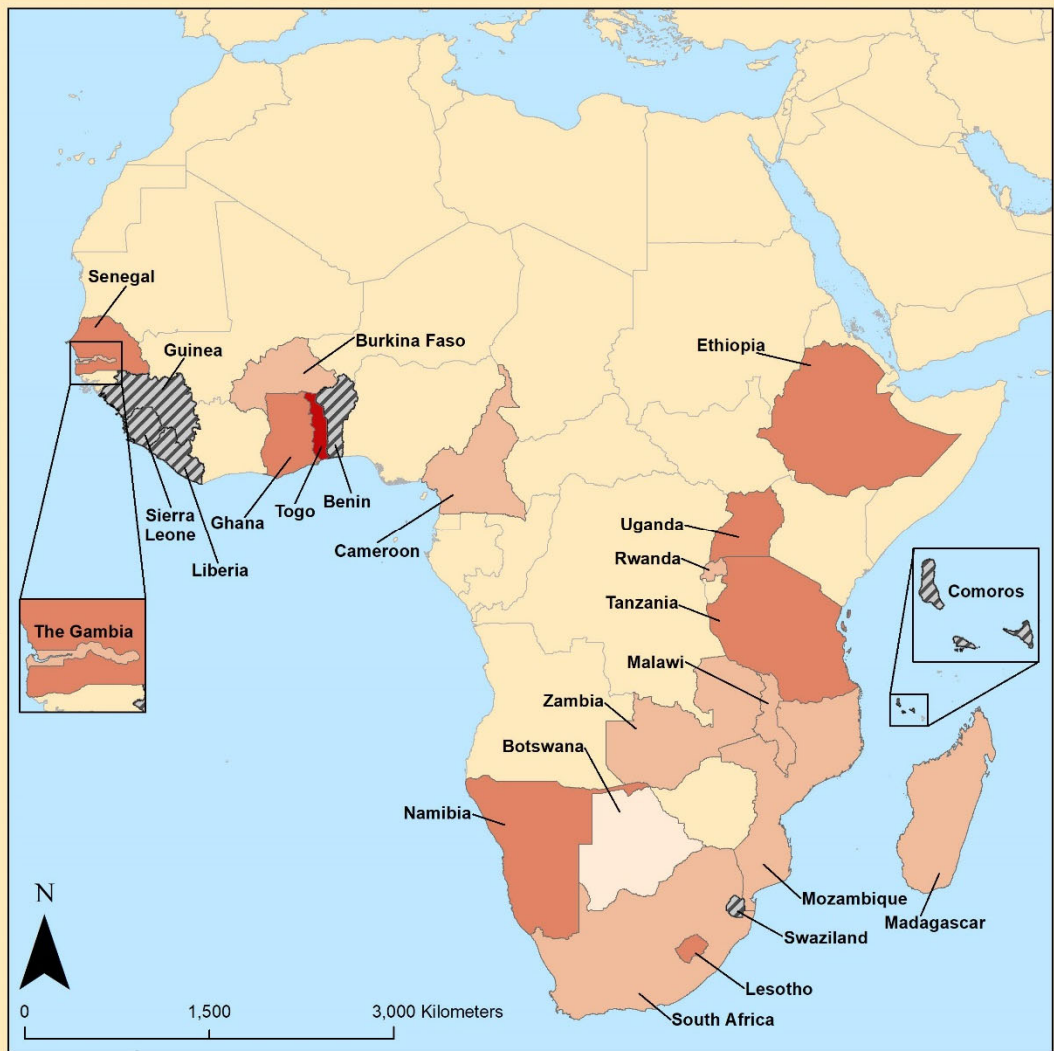

# Percent of Peace Corps Volunteers Who Smoke Four or More Times per Month in 2017

Using self-reported data from the Annual Volunteer Survey (AVS), the graphic illustrates the percent of respondents who smoke four or more times per month by country. Map not drawn to scale.

## Africa Region

### % of PCV respondents

# Percent of Peace Corps Volunteers Who Smoke Four or More Times per Month in 2017

Using self-reported data from the Annual Volunteer Survey (AVS), the graphic illustrates the percent of respondents who smoke four or more times per month by country. Map not drawn to scale.

## Europe/ Mediterranean/ Asia Region

### % of PCV respondents

# Percent of Peace Corps Volunteers Who Smoke Four or More Times per Month in 2017

Using self-reported data from the Annual Volunteer Survey (AVS), the graphic illustrates the percent of respondents who smoke four or more times per month by country. Map not drawn to scale.

## Inter-America and the Pacific Region

### % of PCV respondents

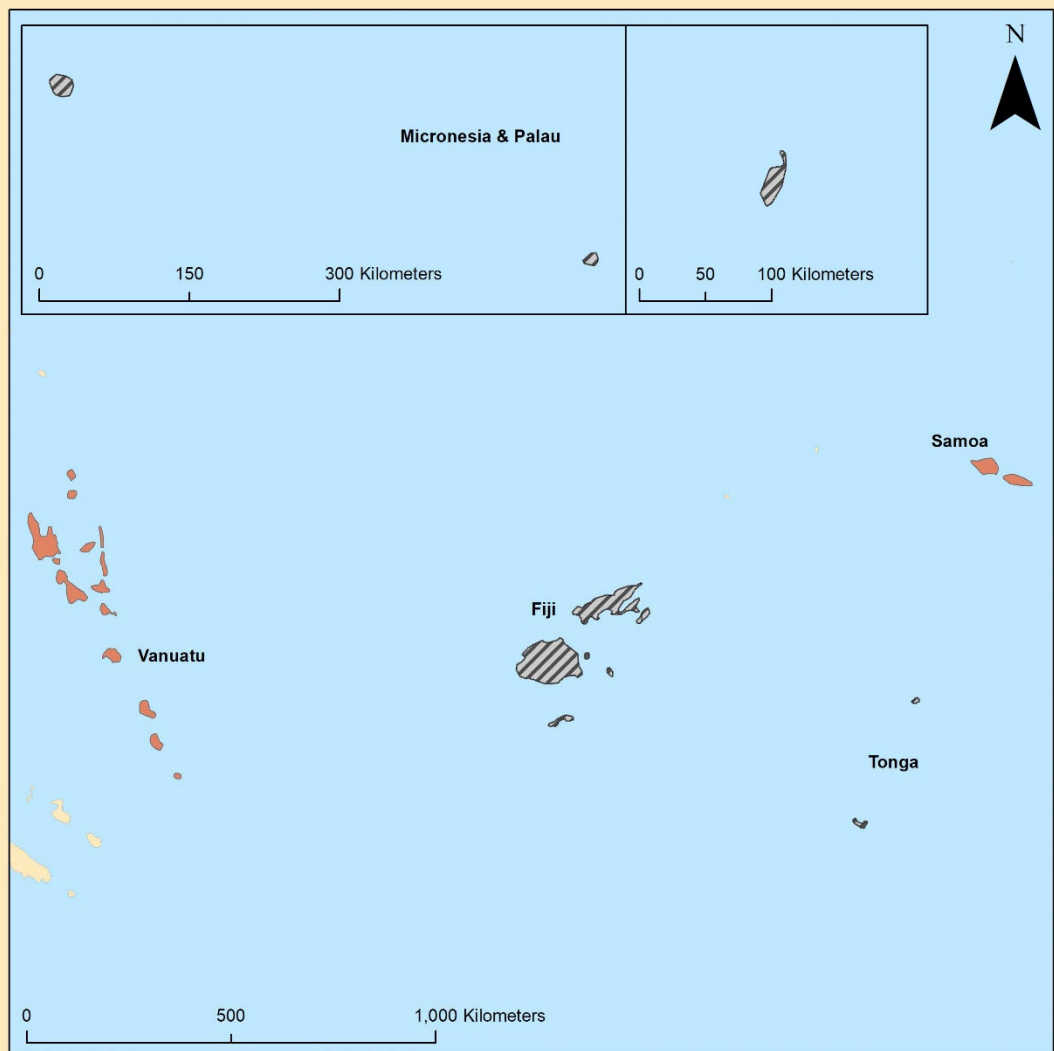

# Percent of Peace Corps Volunteers Who Smoke Four or More Times per Month in 2017

Using self-reported data from the Annual Volunteer Survey (AVS), the graphic illustrates the percent of respondents who smoke four or more times per month by country. Map not drawn to scale.

## Inter-America and the Pacific Region

### % of PCV respondents

## Common Acronyms and Definitions

8A .....	Pre-service accommodation for psychotropic medication management
8B .....	Pre-service accommodation for in-country mental health support and counseling
Avg. ....	Average
Colposcopy.....	Procedure used to diagnose cause of an abnormal pap smear in women
COU.....	Counseling and Outreach Unit
DC .....	Washington, D.C.
Dengue .....	Viral disease transmitted by mosquitoes
EMA.....	Europe, Mediterranean, and Asia region
ESS .....	Epidemiologic Surveillance System
FECA .....	Federal Employees' Compensation Act
Filariasis .....	Diseases caused by microscopic, threadlike worms
FS.....	Field Support
HIV .....	Human Immunodeficiency Virus
HOV .....	The Health of the Volunteer annual report
HQ .....	Peace Corps headquarters
IAP .....	Inter-America and the Pacific region
Leishmaniasis.....	Parasitic disease transmitted by sand flies
Medevac .....	Medical evacuation
No. ....	Number
OMS .....	Office of Medical Services
PCMO .....	Peace Corps Medical Officer
PCV .....	Peace Corps Volunteer
PEP .....	Post-exposure prophylaxis for HIV
PPD .....	Purified protein derivative tuberculosis test
PTSD .....	Post-traumatic stress disorder
RMO.....	Regional Medical Officer
SAD .....	Seasonal affective disorder
STI .....	Sexually transmitted infection
Schistosomiasis	Parasitic disease caused by flatworms that penetrate skin submerged in contaminated water
TB .....	Tuberculosis
TG .....	Technical Guideline
U.S. ....	United States
VT years .....	Volunteer-Trainee years
